

- ❖ *Note to IIGS and Enhanced //e Users:* One of the features of the Apple IIGS and Enhanced Apple //e enables it to boot from a RamFactor card. When you turn the computer on, you can automatically boot into your favorite program in the wink of an eye.

*//e Users:* If the RamFactor card is installed in a slot numerically higher than the first disk drive interface card (i.e. slot 7), the active bootable partition can be booted just like a conventional disk drive.

*IIGS Users:* Boot from the RamFactor in any slot (except 3 and the Memory Expansion Slot) by setting your startup slot in the Control Panel Menu. (See your *Apple IIGS Owner's Guide* for details.)

### **RamFactor 4 Meg Expander**

The RamFactor 4 Meg Expander connects directly to the RamFactor board "piggyback" fashion. Its sole purpose is to add memory to the RamFactor card; it is not a stand-alone card. The Expander can hold 1, 2, 3, or 4 Megs of memory. It's about the same size as the RamFactor card but can hold more memory because it uses 1 Meg DRAM chips instead of 256K chips.

Call Applied Engineering Sales (214-241-6060) or contact your  $\text{Æ}$  dealer to order or for more information.
