

QUANTUM PRODRIVE LPS 170S 3-1/2" SCSI DISK DRIVE

MODEL #	FORMATTED CAPACITY	NUMBER OF LOGICALS	BITMAP SIZE	FORMAT INTERLEAVE	ALPHA MICRO PART NUMBER
LPS 170S	163MB	6	3487	1	PDB-00436-33

In order to use the SCSI format program FMTSCZ.LIT on the Quantum drive pictured above, you must use the following minimum version of the overlay file FMTSCZ.OVR:

- **FMTSCZ.OVR 1.0(111)** or later

(See reverse side for more information)

① = AM-4000 boot Proms are located on a small PCB (printed circuit board) (DWB-00191-10) that plugs into the AM-190 board. In the table above, the revision of the boot PROMs is D00 and the revision of the printed circuit board assembly that contains the boot PROMs is A04. If you have an A03 or earlier boot PROM PCB assembly, you simply unplug it and replace it with an A04 or later assembly.

N/A = NOT APPLICABLE OR NOT SUPPORTED

 = Part numbers highlighted in gray are the only configurations that support **Quantum Empire** disk drives 1GB and larger.

 The boot PROM revision appearing in **bold** in each of the columns is the minimum acceptable revision level applicable to the disk drive shipped with this notice. If you order a boot PROM kit, you may receive a **later revision boot PROM**, which is perfectly acceptable.

This drive does not support AM-175 based AM-1500 computers.
