SYSTEM 6 BONUS

System 6 is power. System 6 is speed. System 6 is a must for all Apple IIGS owners. It includes:

- StyleWriter printer support. Now you can use Apple's low-cost inkjet printer with any Apple IIGS Desktop program.
- Macintosh, Apple DOS 3.3, and Apple Pascal disk support—great for converting your files!
- A completely redesigned Finder—faster, friendlier, and more powerful than ever before.
- The Finder can be set to avoid grinding your 5.25" drives.
- When the computer asks you to insert a disk it needs, you no longer have to hit Return—the computer detects it automatically.
- The screen no longer switches to text mode and back to graphics when launching some Desktop programs.
- New music tools and applications to allow new programs to sound even better.
- Media-control toolset and desk accessory to allow easier integration of video with your multimedia presentations.
- Universal Access features for physically handicapped users.
- More tools for programmers to write great programs. Like drivers for Apple flat-bed scanners and SCSI tape drives.
- Simpler and faster hard drive installation.
- Great documentation.

QC System 6 Bonus Pack

Leave it to Quality Computers to take something good like System 6 and make it great. We looked at the list of System 6 features and asked ourselves, "Self, what would make System 6 even better?" Here's the answer:

- **Clip Art.** We're throwing in over 100 beautiful clip art images, perfect for desktop publishing or hypermedia applications.
- **Clip Sounds.** Because the IIGS's sound capacity is so great, we're also including over 50 digitized sound files. Some are classics while some are the newest on the market. that go great in HyperStudio and other sound programs, or you can have music playing in the background while you work.
- **Icons.** Over 50 fun, useful icons.
- **DA's.** Just to give you more to choose from, we're giving you several handy desk accessories including: Calendar, enhanced Calculator, Scrapbook, Games, and more.
- **Fonts.** Using the same font for everything is very un-cool, so our Bonus Pack includes over 30 display and text fonts.
- **FlashBoot.** What is faster than a speeding disk drive? A RAM disk. FlashBoot lets you automatically set up a super-fast, super-convenient RAM disk.
- **The Apple II Enhancement Guide.** This handy little book is packed with information to help you upgrade your Apple II. It covers RAM, hard drives, accelerators, the Finder, and more.

ABANDONED?

DON'T DO ANYTHING DRASTIC!

You and your Apple II® have *not* been abandoned. Not when you subscribe to *SOFTDISK™* or *SOFTDISK G-S™*, the software subscriptions that keep your Apple fresh and exciting every month!

SOFTDISK for the Apple II and *SOFTDISK G-S* for the Apple IIgs® are produced exclusively for Apple II computers. We realize that thousands of people just like you want to continue to enjoy their Apple II computers. That's why we publish all-new, all-original software for the Apple II each month.

TRY A RISK-FREE ISSUE!

Why not try an issue **risk-free** and see for yourself? Then you'll know what a great investment *SOFTDISK* and *SOFTDISK G-S* can be in the future of your Apple II.

Here's what you'll receive:

- Five to seven new and original programs and features delivered right to your door every month.
- Education and productivity programs, games, utilities, graphics and more for *less than \$1 a program!*
- Full easy-to-use documentation on disk.
- FREE unlimited technical support via our 1-800 hotline.

This isn't shareware or public domain software, so there are no extra fees to pay!

You can order either *SOFTDISK* for the Apple II or *SOFTDISK G-S* for the IIgs. If you own a IIgs, you can enjoy both with our special combo rate – each subscription is totally different!

SEND NO MONEY NOW!

Call 1-800-831-2694, Ext. 1015, now to try an issue risk-free. Review your first issue. If you're not completely satisfied, for any reason, return our bill marked "cancel" and you'll owe nothing! Either way, the first issue is yours to keep FREE.

DISCOVER THE SECRETS OF THE PYRAMID*

*Available on a back issue.

PLUS, GET A FREE GIFT!

We're so sure you'll love *SOFTDISK* and *SOFTDISK G-S* that we'll send you our **Premium Graphics Collection, Vol. 4**, including 200 Print Shop® images, with your paid subscription. It's yours FREE just for subscribing.

So don't throw away a perfectly good computer. Make it come alive every month with a software subscription!

NEW!

\$29⁹⁵ Where in America's Past is Carmen Sandiego?

Give your students an exciting slant on U.S. history with Carmen's latest adventure. Where in America's Past comes with "What Happened When," 1300-page encyclopedia of American culture and history. Over 1200 clues contain fascinating information about many topics. Over 45 destinations are available, covering 5 regions of the U.S.A.

The Treehouse

The Treehouse is designed for graduates of The Playroom. Seven educational games encourage creativity, deductive reasoning and strategic thinking. Subjects include music, animals, math, sentence structure, money and place values. Your child will spend hours exploring. You'll be amazed at how much there is to do!

\$29⁹⁵

ENHANCE

Enhance is Quality Computers' quarterly informative-technical-entertaining newsletter. Enhance gives you the kind of information you need to make your Apple the effective work/educational tool it was designed to be, like product reviews and comparisons, new product announcements, news, and two special sections, Enhancing Education — focusing on key educational topics like grants, fund raising and hypermedia applications; and Club Corner — designed to spark interest in User Groups across the country.

Enhance also includes our catalog — full of all the hardware and software you need for your Apple II, Macintosh, or IBM.

Quality Computers has been publishing Enhance for over 5 years. It's free to all QC customers, or you can call for your free subscription today!

"After reading through this issue of Enhance, I am ready to invest in upgrading my Apple IIGS and add some programs rather than go to the MS-DOS computers. You have restored my faith!" —Robert C. Donald, Hall Park, OK

"Thank you for providing the opportunity for schools like ours to have a chance at getting some of the technology that can bring our computer program into the 90's." —Sandy Kowalczyk, Key School, Annapolis, MD

Get ENHANCE free!

Join the hundreds of thousands who have enjoyed Enhance for over 5 years. Get your free subscription today! (Foreign subscribers add \$20 U.S. funds)

Quality Computers™

POWER FOR PERFORMANCE

Memory Solutions for Apple IIe, IIGS

The Q Drive eliminates disk swapping and helps you work twice as fast!

Thousands of drives later, experts still are praising the Q Drive for its performance and value. *inCider/A+* gave it a four-and-a-half-star rating. Our customers are using words like "amazing" and "fantastic" to describe the way the Q Drive has changed their computing.

The Q Drive features a fast, reliable Quantum mechanism using the latest technology, including auto-parking heads, a voice-coil actuator, and a track buffer. And since the Q Drive uses the industry-standard SCSI interface, you get complete compatibility with your current computer system—and your next, whether it's an Apple II, Macintosh, or IBM.

Q-RAM IIGS

The Q-RAM GS is an economical way to add up to 4 MEG of memory to your Apple IIGs. It's fully compatible with all Apple IIGs hardware and software—including the IIGs RAM Disk and DMA peripherals like the Apple II High Speed SCSI Card. And it's so small that it fits in your shirt pocket.

When you install the Q-RAM GS life becomes just a little easier. Programs load completely into memory at startup, eliminating disk swapping. Out-of-memory error messages disappear. You'll have memory to spare—memory to load desk accessories, or to set up a RAM disk.

Installation is simple. You can expand a Q-RAM GS by snapping in standard SIMMs—we even include the necessary diagnostic software for your peace of mind. And since the Q-RAM GS uses SIMMs, your memory investment won't go to waste.

The Q-RAM GS also includes AppleWorks Expansion software that dramatically enhances the capabilities and speed of AppleWorks.

4-Meg. Q-RAM comes with FlashBoot FREE!

Comes with Switch Hitter and 15 MEG. of free software

The Q Drive's plain-English manual covers more than installation and setup. It even tells you how to manage your mass storage effectively. From GS/OS and ProDOS to backups and maintenance, it's all there, including a glossary of hard drive jargon. And no hard drive is easier to set up and use—install a card, connect two cables, and turn on the power. The Q Drive automatically configures itself to match your computer, and the latest system software is already installed.

Are you interested in upgrading to System 6 but afraid of compatibility problems? Switch Hitter is your solution, allowing you to keep System 5 on your hard drive when you add System 6! A simple keyboard command selects the desired System version at boot time. Additionally, Switch Hitter lets you change your IIGS's System Speed and Startup Slot at boot time and start up a 3.5" or 5.25" disk, all without having to wait for your hard drive to boot into the Finder.

Q-RAM GS

1 Meg.	\$99⁹⁵
2 Meg.	149 ⁹⁵
4 Meg.	239 ⁹⁵

Of course, since you're dealing with Quality Computers, you get an unconditional 30-day money-back guarantee and a five-year warranty. And the price is the best news of all—a 2 MEG Q-RAM GS costs about the same or even less than other IIGs memory cards in a 1 MEG configuration!

Q DRIVE

	\$389⁹⁵
52 Meg.	
105 Meg (only \$4 ⁹⁵ per Meg!)	489 ⁹⁵
200 Meg.	749 ⁹⁵
45 Meg. Removable	499 ⁹⁵
Apple II H.S. SCSI Card	109 ⁹⁵

And remember, you're dealing with Quality Computers, the hard drive leader. The Q Drive comes with a 30-day money-back guarantee and a one-year limited warranty. If you run into a snag, our technical support staff is available for the cost of a phone call. A great drive and great support, at a great price—that's the Q Drive. Find out why it's the best Apple hard drive value—**test drive one today!**

Q-RAM IIe

Snap the Q-RAM IIe into your Apple IIe, and you'll create a whole new computing experience. Programs load faster—and completely. A lot less disk swapping. A lot more productivity. All of AppleWorks, plus your TimeOut applications will completely load into RAM. That means you can concentrate on working—not waiting for disk drives. Plus with a huge 1 MEG. treasure trove of RAM, you can create huge documents, and not encounter a single "Out of Memory" message.

The Q-RAM IIe fits snugly into your IIe's auxiliary slot, and comes with diagnostic software, a 5-year warranty, a 30-day money back guarantee, and is 100% software compatible.

Exclusive Source for the Best IIGS Programs

The Gate™

The Gate™: Fight your way through a castle riddled with mazes to save a bewitched kingdom. Battle against ghosts, magicians, snakes and other evil monsters. You'll need to use your head to solve the puzzles and your agility to conquer the action. Nintendo type action for the IIGS. It earned InCider's Editors' Choice award. Order product number SV71 for only \$30.

Music Studio™

Music Studio™: The premier music composition program, Music Studio 2.0 allows the user to compose, arrange and play their favorite music. Real time Midi input. Design your own instruments! Also included in the pack are additional instrument and Song disks for use with the program. Order product number BR54 for only \$39 for non-members or \$34 for members.

Photonix II™

Photonix II™: In Speed We Trust! That's the motto of the FTA and in this fantastic disk duplication program, the FTA lives up to their motto. This program will copy a 3.5" disk in less than 30 seconds. It's by far the fastest disk copier that we've ever seen. Plus it has lots of other useful utilities. Order product number FT72 for only \$20 for non-members or \$15 for members.

Space Fox™

Space Fox™: Pilot your spacecraft through multiple levels while you're constantly under attack. Use your arsenal of weapons and your wits to destroy the attacking ships. Use your skills to strategically dock with your home base. Be a Space Fox and master the levels of the galaxy. This game is rated a WOW!! Order product number SV70 for only \$30.

Mavis Beacon Typing™

Mavis Beacon Teaches Typing™: Lessons are constructed from an enormous database. Features constantly updated information and never the same lesson twice. Focus on word/letter combinations and watch your improvement show on the performance charts. Includes a typing game to give you a break in the action. Product number SF53 is \$20 (non-member) or \$15 (member).

FEATURES

Kids Turn On to Hi-Tech by Leslie Eiser 26
 Today's kids are pretty sophisticated. Fortunately, software is staying one step ahead of them — new programs for both the Apple II and the Macintosh combine fun and learning in ways that keep children, parents, and teachers satisfied.

Home Room by Cynthia E. Field 32
 In alternative classrooms and home-based schools across the country, Apple computers and a host of outstanding programs offer kids a wide range of individualized educational activities.

JUNE BLUES

I READ THE SOFTWARE RATINGS in your June 1992 "Apple II Report" and wished you'd printed the information on Microgram's *Fractal World* before I plunked down \$14.95 for the program.

I work with gifted students, and have used several shareware programs that have more going for them than *Fractal World*. The interface is amateurish and outdated, and the fractal graphics are of low resolution and poor quality. I often show fractal graphics to math teachers who state that "Apple IIs aren't real computers." *Fractal World*, however, will remain on the shelf.

Charma Shiroky

1734 Murray

Wichita, KS 67212

COLOR COMMENTARY

YOU MAY NOT BELIEVE THIS, but my boss' hair turned completely gray when he saw that you misspelled his name (it's *Tom Weishaar*, not *Weissnar*) in your May 1992 article "Working the Nets" (p. 28). He blushed a light shade of pink when he read that you called him a celebri-

ty, but saw yellow stars when he realized you were giving him celebrity status on CompuServe! He runs the Apple II RoundTables on GENie.

GENie isn't as cumbersome to navigate as some would have you believe. (I caught on quickly <grin>.) First, the *HHH* you have to type upon connection becomes second nature after a short time. If you space out and GENie pouts, you can just hang up and try again. GENie does use a direct-dial system exclusively, but because it has more local-access numbers than most other services, long-distance charges shouldn't be a problem for most people.

GENie does use page numbers for navigation, but the keyword *A2* will take you to the Apple II RoundTable. And, remembering to type *Mac* to get to the Macintosh RoundTable is something that even a Mac user can remember. (I'm kidding, I'm kidding, I use Macs, too!)

While I'm at it, I'd like to add that Resource Central is also a source for Hyper-Mover (Letters, May 1992, p. 9), and the sole source for HyperCard's v1.1 upgrade.

Ellen Rosenberg

Resource Central

Box 11250

Overland Park, KS 66207

My face is red over blowing Tom's favorite location, but I'm still not convinced of the user friendliness of GENie's interface. Admittedly, area keywords exist, but e-mail, message posting, and downloading are still a bit hairy, especially for novices. You know you're a good piece up the proverbial river when a SIG (special-interest group) or RoundTable has a topic reserved for veterans to argue over the best way to tweak the command line. — C.C.

HOT FOR COOL DISKS

I'M ENJOYING OWEN LINZMAYER'S "Way Cool Mac" disk (January 1992, p. 30) very much and look forward to

the new one ("Totally Radical Mac," June 1992, p. 34). As I'm one of the many people who doesn't have access to a user group or on-line service, I appreciate the opportunity to acquire such "utilities."

John R. Deschner

1427 South Pinecrest

Wichita, KS 67218

YO, DUDE. I'D TOTALLY LIKE TO be rad and way cool, too. Enclosed you'd possibly find my check in the amount of 10 big ones to cover this really awesome transformation. Like, thanks, man. I really mean it.

Andy Booth

P.O. Box 4731, Dundee Road

Pinehurst, NC 28374-4731

*Glad to do my part to make the Mac world a cooler place. I've assembled even more fun programs in my upcoming Sybex book, tentatively titled *Totally Rad Mac*. If you haven't ordered the first two Mac disks yet, they're still available for \$5 each. Send check or money order (U.S. funds) to Owen Ink, 1830 Lawton St., San Francisco, CA 94122-3328.—O.W.L.*

CORRECTIONS

Roy Lovejoy's program **DeskPat**, mentioned in our "Totally Radical Mac" feature (June 1992, p. 34) is a \$15 shareware program (not free-ware, as stated in the "Product Information" box). Thanks to John Pivovarnick of Philadelphia, Pennsylvania, for pointing out our error:

The current version of **Astronomer GS**, reviewed in the July 1992 "Apple II Report" (p. 28), is not distributed by Absoft Corp. It's available as share-ware for \$34 from Larry D. Bell, 2537 Jefferson Street, Long Beach, CA 90810.

INTELLIGENT TUTORING

T

he **Intelligent Tutor Self-Study Series for Math**, designed by educators, helps students and adults master all levels of math from grades 7 to 12.

The package consists of two independent parts. **Concepts and Skills** teaches ideas and methods; through animation and graphics, it brings math to life. It's composed of six modules (complete set is \$219.95):

Pre-Algebra (\$49.95): arithmetic, number theory, fractions, expressions, equations, inequalities

Algebra I (\$49.95): equations, word problems, powers and exponents, polynomials, factoring, quadratics

Geometry (\$49.95): lines, triangles, quadrilaterals, circles, formulas, constructions, proofs

Algebra II (\$49.95): linear equations, systems of two or three equations, roots and radicals, conic sections, exponential and logarithmic functions

Trigonometry and Advanced Topics (\$49.95): trigonometric functions, identities, right triangles, series and progressions, probability and statistics

Introductory Calculus (\$49.95): functions, differential calculus, integral calculus, applications, proofs

Practice and Review (\$269.95) helps students build problem-solving skills with a comprehensive series of drill-and-practice exercises and diagnostic tests. Its seven modules correspond to Concepts' six parts, plus **SAT Math** (\$69.95).

The series works with any 48K Apple II or any Mac with 1 megabyte of RAM and an 800K disk drive. For more information, contact Intelligent Software, 9609 Cypress Drive, Munster, IN 46321, (219) 923-6166. — P.S.

WORTHY SOFTWARE

An Apple IIc as a graduation present in 1986" started **Phil Shapiro** on a career in computers. "Not being able to afford the programs I wanted, I taught myself to program in Applesoft BASIC," he reports. "I sold some programs to a magazine and discovered that having people send you money for your creative work serves as an inducement to broaden and hone your creative skills."

Creativity didn't pay all the bills, so Shapiro found work teaching school. "I'd bring some of my own programs into the classroom to try them out on the kids," he recalls. "Kids are very honest. They'll tell you if your program needs improvement. They'll also give you useful suggestions."

Shapiro's students taught him something important: "I felt I could have a greater impact on children by devoting myself full time to creating and distributing educational software. So I quit teaching and started **Balloons Software** in August 1990. I saw a need for educational software that helps kids learn, but doesn't cost an arm and a leg.

Schools have a fixed budget. You'd have to spend \$20,000 to build a decent collection. A few schools do. But the vast majority have meager collections."

To keep costs low, Balloons keeps its ideas simple. "Back in 1988," Shapiro explains, "I started experimenting with a program to display text in a large, proportionally spaced font. The result was **Large-Text Joyreader**. I didn't have the programming skill to transform it into a

full-fledged creativity toolkit." Shapiro relates that **Bernie Benson**, a talented programmer, a member of the user group Washington Apple Pi, and a visually impaired person, "saw great potential in an Apple II toolkit to assist those who are unable to read regular screen text. I was more interested in the software as a generic educational product, but our interests and visions overlapped." Balloons would publish **Big Text Machine** as a "creativity toolkit."

Shapiro remembered where to find the smartest software critics. "In September 1991," he says, "we located six schools to help us beta-test. In exchange for a free site license, each school dedicated an Apple II to repeatedly display students' creative writing in the school library."

.....
"Schools need software that helps kids learn, but doesn't cost an arm and a leg."

What else can you do with it? "To help show off BTM, I constructed a disk of sample text files," recalls Shapiro. "It included a couple of original children's stories I wrote. I never bothered sending them out to print publishers, since they reject 99 percent of unsolicited submissions. And

that's a real shame, because there are talented people out there writing fiction and non-fiction for children. I'm hoping BTM will help get authors to release their writings as disk-based freeware. Did you know that Dr. Seuss' first book was rejected by 27 publishers?"

Phil Shapiro's plan to bring good cheap software to schools is finally gaining acceptance, too.

What 2nd Graders Need to Know

* That butterflies are free.
* That passing the ball is more fun than keeping it to yourself.

* That new kids to your school should be made to feel welcome, especially if they don't speak English.
* That being different is okay.
* That parents sometimes make mistakes.

BTM: Special needs meets creativity.

— P.S.

NEW RESOURCES

SHARE AND SHARE ALIKE

The best low-cost software comes out of hiding in **The Mac Shareware 500**, by Ruffin Prevost and Rob Terrell. If you like the sound of inexpensive software of the highest quality, the book comes with three disks of the best, and every program mentioned in the book is featured in the **Mac Shareware 500 Library** on America Online. If you're not already on AOL, The Mac Shareware 500 even offers five free hours on line — all you need is a modem.

The Mac Shareware 500 is a complete consumer's guidebook, explaining the nature of shareware, where to find it, how to access it and download it, as well as the protocol of payment and methods of virus protection. The description of each piece of software includes an impartial rating and a brief tutorial.

You probably didn't even know some of this software existed — and you'll find everything from fun and games to work and learning. The suggested retail price is \$39.95, but you may save that much the day you buy it. It's published by Ventana Press, P.O. Box 2468, Chapel

Hill, NC 27515, (919) 942-0220. For more information circle number 350 on the Reader Service card.

ECO INFO

EcoLinking: Everyone's Guide to Online Environmental Information, by Don Rittner, encourages scientists, environmentalists, and concerned citizens to use computer technology to share ideas and research. *EcoLinking* is the story of how we can put networks,

bulletin boards, and on-line services to work to save the earth.

Offering step-by-step instructions on accessing the immense volume of academic, bibliographic, and scientific information found on global networks and commercial on-line services, the book focuses on how to go on line and what kinds of data you can retrieve. *EcoLinking* also explains how to use bibliographic retrieval services, CD-ROM databases, and electronic bulletin-board systems to conduct scientific and environmental research on line.

Of particular note are numerous case studies of citizens and activists who have

used their personal computers to help them care for the global village. *EcoLinking* is inspiring as well as informative — a must for any science teacher with a computer and modem. The suggested retail price is \$18.95; it's published by Peachpit Press, 2414 Sixth Street, Berkeley, CA 94710, (800) 283-9444. For more information circle number 351 on the Reader Service card.

NEW SOFTWARE

■
BUG KILLER

The Byte Works has designed **ORCA/Debugger** for programmers who use C and Pascal on the Apple IIGS — it's the only source-level debugger available for finding and fixing problems with CDEVs, XCMDs, 320-mode programs, and programs that run from the Finder.

Because ORCA/Debugger is an INIT file, it can break into almost any C or Pascal program, except from within an interrupt handler.

Like GSDebug, the popular machine-level debugger from Apple, ORCA/Debugger has its own private text screen, so you can debug graphics and desktop programs without interfering with the desktop display. In fact, ORCA/Debugger works with GSDebug; you can install both at the same time.

With ORCA/Debugger you can view memory or variables in any of 13 formats, set or clear break points while your program runs, see variables

without typing their names, and change the value of a variable. The utility comes on a single 3.5-inch disk, with a 60-page manual containing a tutorial and examples, for \$50 from the Byte Works, 4700 Irving Boulevard Northwest, Suite 207, Albuquerque, NM 87114, (505) 898-8183. Circle number 352 on the Reader Service card for more information.

◆ ■
QUIZ ME, KATE

The Public Domain Exchange now means more than public-domain software — for the same low price of \$5 each, PDE offers six **Quiz Disks**, each with scores of questions and answers. Topics include vocabulary, geography, synonyms, literature, film, and television. These are original

programs written for PDE. The games ask questions in multiple-choice format. You have three tries at the right answer; if you still can't get it, the computer fills it in. Whether you use them in the classroom or as a trivia

game with friends, these fast-paced Quiz Disks will provide hours of fun.

Each disk is \$5 plus shipping, from the Public Domain Exchange, 2076C Walsh Avenue, Santa Clara, CA 95050, (800) 331-8125, (408) 955-0292 in California. Circle 353 on the Reader Service card for information.

GET ORGANIZED

The **Desktop Manager**, a collection of Apple II GS add-on utilities that work with both ProDOS and GS/OS applications, is now available from TMS Peripherals for less than \$40.

You get a "notepad" word processor, appointment calendar, calculator, print manager, disk manager, telecommunications manager, screen saver, and more. Each application is only a keystroke away in any program.

Beagle Bros' TimeOut series for AppleWorks and the Finder do some of the same jobs. DM's strength, however, is that it works with any program that runs on the GS. It comes on a single 3.5-inch disk; a hard drive and expanded memory are recommended. Contact TMS Peripherals, 1120 Holland Drive, Suite 16, Boca Raton, FL 33487-2729, (407) 998-9958, or circle number 354 on the Reader Service card.

Blast your way through Space Fox.

NEW GAMES

THE SWISS CONNECTION

Bright Software, based in Switzerland, has been working with Seven Hills to bring exciting new GS games to market worldwide.

Gate (\$30) was our Editors' Choice last December (p. 88). You're held captive inside a castle and must battle your enemies and solve some tough puzzles to find an escape. It's full of brain teasers, action, animation, and lively stereo music and sound effects.

Space Fox (also \$30) is an exciting arcade game with more than a megabyte of sound files; you're an ace pilot guiding a spaceship through nine levels of bad guys. Your mission is to destroy The Brain at level 10 — but you'll have to collect fuel, shields, and weapons first.

Within the U.S. contact Big Red Computer Club, 423 Norfolk Avenue, Norfolk, NE

68701, (402) 379-3361.

Outside the U.S., contact Seven Hills Software, 2310 Oxford Road, Tallahassee, FL 32304, (904) 575-0566, or circle 355 on the Reader Service card.

SHAREWARE SOLUTIONS
BY JOE KOHN

THE LAST WORD

In the Dark Ages before the Apple II, people composed letters, reports, and correspondence with a mechanical device called a typewriter. This obsolete contraption was loud and slow — and if a typist made a single mistake, he or she had to start all over again. It's no wonder that the word processor has become the most common application of the personal computer.

With a word processor, you can type much faster and correct mistakes on the spot. With sophisticated features like cut and paste, you can generate form letters easily, and, thanks to high-quality printers, anyone with a word-processing program can even become a desktop publisher.

Among early Apple II word processors, there was only one really viable choice: **AppleWriter** by Paul Lutus. It was a powerful program, but learning it required real dedication and mastering it even more. Lutus eventually released **FreeWriter**, an easier word-processing program based, in part, on AppleWriter. It didn't cost anything, but there were a couple of major deficiencies — the primary one being a lack of print capability.

Because it was copyrighted freeware, users could give the program away, but not sell it. Al Rogers, an educational consultant, acquired an early version of FreeWriter and decided to improve on it — and **FrEdWriter** was born. FReE EDucational WRITER is now in use in thousands of classrooms around the country, and has even been translated into Spanish. Version 5.0 still works on any Apple IIe with 64K, as well as on Apple II networks and on the Mac LC (with II Card installed). An estimated 60 percent of all students in California used FrEdWriter to learn word processing. It's still easy to operate, but it's got a lot of power and a lot of advanced features. One favorite option among teachers is "prompted writing" — nonprinting screen boxes enclosing individualized instructions from teacher to student. A teacher can easily create an essay exam on disk, for example, then use it in a creative-writing course, or wherever teacher input facilitates the writing process.

True to the original spirit of FreeWriter, FrEdWriter can be given away, but not sold. A nonprofit organization, the FredMail Foundation, distributes the program and supports it with additional disks of teaching materials. The Foundation may even be able to arrange for a FrEdWriter expert to visit a school (subject to geographic limitations) and show teachers how to use the program. But FrEdWriter isn't just for kids. It's a powerful program that can serve the beginning word-processing needs of any Apple II owner.

While there's only one IIe freeware word-processing program worth recommending, GS users who use System 5.0.4 or later have a wide choice of shareware in that genre. Some aren't as full featured as FrEdWriter, but most are even easier to use and can put beautiful-looking text on paper.

All of these GS-specific programs are mouse driven and employ the familiar desktop interface with pull-down menus. They all employ GS/OS' **TextEdit** toolset and can therefore use GS fonts in different styles and colors, and TrueType fonts if WestCode Software's Pointless utility is installed. All but one described here use the operating system's **Print Manager** feature to output text to any printer that works with GS/OS.

Big Edit Thing (BET), by Jim Murphy, is a \$10 shareware new desk accessory (NDA), conveniently accessible from within any

ALLTECH ELECTRONICS Co.

HARD DISKS • RAM EXPANSION • PARTS

Visa & Mastercard • COD • School & University P.O.s

standard GS/OS application, such as HyperCard IIgs, HyperStudio, Platinum Paint, and the Finder. BET offers three types of rulers and supports tabs. It can load ASCII text, source code, Teach material, and AppleWorks documents, and can save in any of those formats. There's a movable find-and-replace window, and a nifty automatic-save function. BET can use fonts of up to 72 points, and supports full, left, and right justification with a single click of the mouse.

GSXEdit, a freeware program by Mark Cinelli, loads text, Teach, and source files and can save in those formats. Multiple text windows can be open at the same time, making cut and paste between documents easy. There's a built-in clock that displays the time in the menu bar; other utilities let you rename or delete files. Although it's not as full featured as certain other titles, GSXEdit's price sure can't be beat.

Revise ASCII Text (RAT), a \$10 shareware program by Bill Tudor, offers an extensive on-line help system accessible via pop-up menus. It also allows for multiple re-sizable windows open at the same time, and supports the Apple extended keyboard. RAT loads and saves ASCII text, and source and Teach documents. It includes four types of find and replace functions, and supports fonts of up to 72 points.

WriteAway, a \$10 program from Lane Roathe, may be the most fully featured shareware word processor. It allows simultaneous re-sizable and stackable text windows, and includes a special pull-down menu to allow easy access to all open windows. It provides for full, right, or left justification and also includes centering. Upon payment of the shareware fee, full access to the Preferences menu is available, which lets you set default pathnames for data files. WriteAway can load AppleWorks, text, or Teach files, and can save as Teach or text. An extensive Document Info option shows you how many words you have, as well as the number of type styles you're using in a document and the amount of RAM still available. You can set margins, tabs, and indentation from a pull-down menu.

Writel, a shareware program by Chris Haun, carries no set fee. Although it offers the fewest number of features of any of the GS word-processing programs reviewed here, it's a new desk accessory smaller than 15K in size — installable on a startup disk even if you have only a single 3.5-inch drive. Writel doesn't support printing. It loads text and Teach files and can save in those formats. Writel is more a text-file reader than a word processor — it's particularly handy from the Finder or within HyperStudio or HyperCard IIgs — yet despite its lack of features, it's popular and dependable.

If you're a professional writer, you may want to invest in Claris Corporation's **AppleWorks Classic** or **AppleWorks GS**, both feature-laden programs with hefty price tags. But if you don't need sophisticated options, you might just find that one of these freeware or shareware programs meets all your word-processing needs — and, of course, any one of them beats that old-fashioned typewriter.

TO ACQUIRE FREDWRITER AND AN UNLIMITED SITE LICENSE, SEND \$20 TO THE FREDMAIL FOUNDATION, P.O. BOX 243, BONITA, CA 91908. FOR A DISK CONTAINING THE GS WORD-PROCESSING PROGRAMS DISCUSSED HERE, SEND \$5 (U.S. FUNDS ONLY) TO JOE KOHN, 166 ALPINE STREET, SAN RAFAEL, CA 94901. COST COVERS SHIPPING ONLY; YOU'RE RESPONSIBLE FOR SHAREWARE FEES WHERE APPLICABLE.

APPLE CLINIC

BAUD YOUR TIME

Sometimes patient experimentation is the only solution to the mystery of telecommunications.

BY CECIL FRETWELL

MODEM TROUBLES

I'M HAVING A PROBLEM CONNECTING a modem to my Apple IIGs. I've tried different cables, different telecommunications software, and many combinations of Hayes-compatible commands. The modem will make the call, but when the recipient answers, the software crashes while still showing *connect* in the status line. Sometimes it crashes with the garbage characters *ff* on screen. Any ideas?

Doug Berry
Amherst, MA

Second only to printers, getting modems to work with any piece of computer gear can be a big pain in the brain. For starters, switch all your modem settings back to the factory defaults. Your modem should work straight out of the box.

You state that your status line shows *connect* after what you think is a crash. Are you sure it's a crash, though? When the modem on the other end of the communications line answers the phone, you should hear a "scream" or a warbling sound, more technically known as the carrier signal (unless you've turned off the modem speaker). It'll stop abruptly.

That doesn't mean a crash; you should be connected and be able to "talk" to the other computer. You can verify that by looking at your modem lights: If the device's *OH* (off hook) and *CD* (carrier detect) lights are on, you've connected successfully.

Talk to the people you're trying to dial. To gain communication after the *OH* and *CD* lights come on, you may have to hit the return key several times.

Or if you're trying to dial into the popular bulletin-board system *GENie*, you have to type the letters *HHH* before the complete connection is made. You may see the garbage characters *ff* if you don't respond soon enough after dialing into *GENie*.

Those characters may also indicate the link is established, but at the wrong baud rate; that is, the speed of data transmission on one end isn't the same as the speed on the other end. Perhaps the answering modem can't detect your modem's speed.

For example, the answering modem may not support 2400 baud, or it may be hard wired to a speed other than 2400 baud — say, 1200 baud. The ultimate solution to your problem will depend on what kind of modem you're using and whom you're calling.

SELF-BOOTING DISK

I'D LIKE TO CREATE A SHORT Applesoft *STARTUP* program that would load and launch a binary file from my 5.25-inch disks. I want to make my disks self-booting so that I don't have to go into *BASIC* and "smart run" the files.

Chuck Orem
Benton City, WA

Writing a *STARTUP* program to launch a binary file is easy enough. Just add the line `PRINT CHR$(4);"-MY.PROGRAM"`. Including the hyphen character will *EXEC*, *BRUN*, or *RUN* the file *MY.PROGRAM* automatically.

Creating a self-booting *ProDOS* disk is a bit of a trek. Under good old *DOS 3.3*, all you had to do was have a program in memory and type *INIT HELLO*, and a few revolutions

later you had a bootable disk that would start whatever program you named in the *INIT* command automatically.

Under *ProDOS*, you need the *System Utilities* or the *GS/OS Finder* to format a disk. But even then, just plugging it into a drive will reward you with an *UNABLE TO LOAD PRODOS* message. To make a disk self-booting you need three items:

- **First, a file called *PRODOS*.** This is the first file the boot process looks for, and without it the system hangs. Copy the file *P8* from the *GS' SYSTEM* folder to your disk and rename the file *PRODOS*. If you have a *Iie* or a *Iic*, copy the *PRODOS* file from the operating-system disk.

- **Second, a system file.** Once the boot process finds *PRODOS*, it then looks for a system file, file type *SYS*, whose name ends in the characters *.SYSTEM*. It uses the first one it finds on disk. If you're going to work in Applesoft *BASIC*, copy *BASIC.SYSTEM* from the root directory of your operating-system disk.

- **Third, a *STARTUP* file.** After the system executes *BASIC.SYSTEM*, it searches for a file named *STARTUP* and tries to execute it. All you have to do is create such a file and include the branching line `PRINT CHR$(4);"-MY.PROGRAM"`, and you'll have a self-booting *ProDOS* disk with a startup program.

80-COLUMN SWITCH

I UNDERSTAND THAT TO SWITCH to the *GS' 80-column* mode, you have to issue the *BASIC* command `PRINT CHR$(4);"PR#3"` followed by `PRINT CHR$(18)`. Please explain.

Zachary Zebrowski
Windsor, MA

The command `PRINT CHR$(4);"PR#3"` activates the 80-column card, zapping your display into 80 columns and presenting you with a solid, non-flashing rectangle for a cursor.

With the 80-column card active, the command `PRINT CHR$(17)` switches to 40 columns, and `PRINT CHR$(18)` returns to 80-column mode.

Whether you're working in 40 or 80 columns, once you turn on the GS' 80-column card, you have access to a much more "intelligent" text display.

Before the 80-column card was introduced, Apple II text-programming options were limited. Basically, you could move the cursor up, down, right, and left. Activating the 80-column card gives you command controls such as PRINT CHR\$(11), which clears the screen from the current cursor position to the bottom.

For details on the 80-column card and a complete listing of control characters, pick up a copy of the **Apple IIe Technical Reference Manual**, \$24.95 from Addison-Wesley Publishing Company, Trade Computer Books Division, 1 Jacob Way, Reading, MA 01867, (617) 944-3700.

WHERE'S EPIC?

WHAT HAPPENED TO EPIC TECHNOLOGIES and its iron-clad five-year warranty? I'd like to talk to the company's technical-support staff because I'm having problems with my Epic Classic 2400 modem.

**Martin Gruen
Barrington, NJ**

Walt Roshon, "Herr Fixit" on America Online, still has parts and some old Epic modems, and offers low-cost repairs. Contact him by mail c/o DuPont Imaging Systems, Service and Support, 258 Chapman Road, Chopin Building, Newark, DE 19702. If you cover the shipping costs, Walt will provide a free repair estimate. He asks that you be as detailed as possible when you describe your problem, to save time and prevent any possible damage to his GS.

THIS MONTH WE BID FAREWELL TO ACE CLINIC SURGEON CECIL FRETWELL. FOR THE PAST TWO YEARS, CECIL HAS RESPONDED AT A MOMENT'S NOTICE TO APPLE EMERGENCY CALLS FROM READERS AND SOMETIMES FROM THE *INCIDER/A+* STAFF, AS WELL. THANKS, CECIL, FOR YOUR EFFORTS AND YOUR PATIENCE. NEXT ISSUE, LOOK FOR A BRAND-NEW *INCIDER/A+* CLINIC CHOCK FULL OF QUESTIONS, ANSWERS, AND HELPFUL HINTS ON APPLE II AND MACINTOSH HARDWARE AND SOFTWARE. ADDRESS YOUR CORRESPONDENCE TO APPLE CLINIC, *INCIDER/A+*, 80 ELM STREET, PETERBOROUGH, NH 03458. BECAUSE OF THE VOLUME OF LETTERS, MOST WON'T APPEAR IN PRINT, BUT WE'LL TRY TO RESPOND IF YOU ENCLOSE A SELF-ADDRESSED, STAMPED ENVELOPE.

BRIDGING THE GAP

TAILOR-MADE TYPE

Dress up your GS documents — borrow an ensemble of classy-looking TrueType fonts from the nearest Mac.

By GREGG KEIZER

WHEN YOU GO OUT ON THE TOWN, you dress in your best. And when you work with paper, you better follow suit. Long gone are the days when you could squeak by with scratchy dot-matrix characters on the documents built with your computer. To keep up with the digital Joneses, to make a positive impression, you need attractive reports, form letters, and spreadsheets. And to get that you need good-looking type.

Fonts are the answer. Every computer equipped with a graphical user interface — from the Macintosh and the Apple IIGS to the ubiquitous PC — eats fonts for breakfast, lunch, and dinner.

Varied type provides the medium for your message. Straightlaced reports and letters? Try Times or Palatino. A casual approach? Head for a *sans-serif* typeface like Helvetica. Headlines and titles that shout? Go for Avant Garde.

Because you can never have too many fonts — though you can easily pack too many into one document — most appearance-savvy desktop publishers, writers, and number crunchers collect all they can, just in case they need one special typeface for that one special message. Fortunately, you can share fonts between machines, effectively doubling (and sometimes tripling) your available library of typefaces and styles.

Building a bridge between fonts is either no trouble at all or all the trouble you can handle, depending on what you start with and what you need in the end.

Either way, you can move fonts from the Macintosh to the Apple IIGS, sometimes reverse the direction, and, if you're so inclined, even bring the PC into the picture.

TO THINE OWN SELF BE TRUETYPE

The easiest fonts to share are also the newest. TrueType fonts, a new standard pushed by Apple Computer and Microsoft Corporation, have made the transition to the Apple IIGS.

TrueType fonts are *outline* fonts, just as PostScript fonts are. That means that TrueType fonts are essentially mathematical descriptions of characters, not pixel-by-pixel pictures. Unlike PostScript, though, TrueType processes your request — the font, its size, and style — on the fly as it generates the outline and fills it in. That means you can print TrueType type on non-PostScript printers.

And because TrueType not only works with your printer, but also with your computer's display (again, unlike PostScript), you see sharp-edged characters, even in

large sizes, on the monitor as well as on the printed page.

Outline fonts edge out the familiar *bit-mapped* variety in several ways. First, outline-font files are much smaller than sometimes-behemoth bit-mapped font files.

Second, because every character is drawn from a mathematical model, you need only one file for each font, not a slew of bit-mapped font renderings in multiple sizes. To print to the ImageWriter II, for example, an Apple IIGS application demands renderings in both the screen size and one twice as large, effectively doubling the number of font files.

Third, outline fonts can display and print accurately in any point size, from 1 to 255 points. (A point is one-72nd of an inch.)

Finally, outline fonts, TrueType fonts in particular, are much more independent of both the computer and the printer. Not only is a TrueType Geneva font on a Macintosh essentially the same as a TrueType Geneva font on a PC running Windows, for instance, but TrueType can print to hundreds more printers, including dot-matrix, ink-jet, and low-cost laser models that don't include PostScript.

If you have an Apple IIGS and want your work to look great, not just good, you need a copy of WestCode's **Pointless**. Once installed in your GS' *System* folder, this INIT puts TrueType at your disposal. (See our review of Pointless in the July 1992 issue, p. 25, for details.)

Pointless makes it possible for 16-bit applications such as AppleWorks GS to both display and print fonts in any size, without a reduction in clarity, or the dreaded "jaggies."

More importantly, it lets those applications print sharp characters to almost any printer, even the lowly ImageWriter II and non-PostScript devices such as the HP DeskJet or LaserJet. (You still need the appropriate printer driver in your GS' *System* folder, though.) In some cases, the

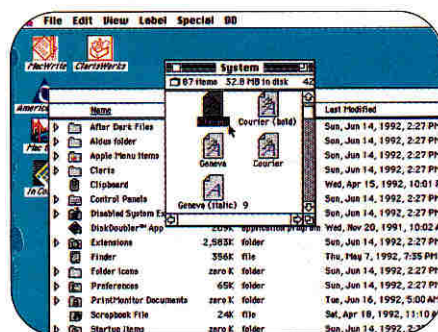

Figure 1. Macintosh TrueType fonts sport a distinctive icon.

results are as crisp as anything you'd get from an expensive PostScript laser printer.

Pointless comes with seven TrueType fonts, but any self-respecting desktop publisher won't stop there. You'll go looking for TrueType fonts on commercial collection disks, user-group compendia, and on-line services — and you'll find them. Still, the first place you should look for TrueType is as close as a nearby computer — a Macintosh computer.

BUILD A BRIDGE

Much of the time, all you have to do is move a TrueType font file from the Mac to the Apple IIgs. Pointless does the rest.

Start simple. GS/OS System 6's HFS FST (*hierarchical file-structure file-system translator*) lets you stick a Macintosh 400K or 800K floppy disk into the IIgs' 3.5-inch drive, then read from and write to that disk. It makes font transfers from Mac to GS and back a snap.

Head to the nearest System 7 Macintosh and open its *System* folder. Down the list is the *System* file. Double-click on its icon and in a moment you'll see names of all the fonts — both bit-mapped and TrueType — installed on that computer. You can spot the TrueType fonts by their peculiar icon (**Figure 1**).

Now copy a TrueType font file to a 400K or 800K floppy disk by pressing the option key and dragging the icon to the disk. You might want to start with Times, a classic *serif* font not included in Pointless' initial offerings.

Walk the Mac floppy to the GS and insert it into the drive. In a moment System 6's HFS FST reads the Mac disk and puts its icon on screen. Double-click to open the disk's window, then drag the Times TrueType font file to your GS' *System* folder.

The Mac's TrueType font may now be on the GS, but the computer won't recognize the file for what it is until you complete the process. Open the Control Panel and select Pointless by double-clicking on its icon (**Figure 2**). Here's where you add TrueType fonts to GS applications.

Click on *Add*, then locate the Times TrueType file in the subsequent *Get File* dialog box. Select it and press Return. You can check things out by heading back to the desktop and locating the file in the

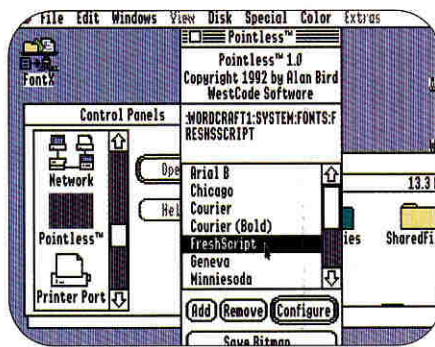

Figure 2. Select Pointless from the GS' Control Panel to translate Mac TrueType fonts.

System folder; *Times* now sports that distinctive TrueType icon.

The next time you launch AppleWorks GS (or any other 16-bit application that supports TrueType, such as Roger Wagner Publishing's HyperStudio GS), you'll see *Times* on the *Font* menu. Choose it and pick a font size and Pointless goes to work, churning out a font description and placing it in memory.

APPLES SHARE

If you're not using System 6 on the GS, you'll have to find another bridge from the Mac to the IIgs. Fortunately, there's more than one way to move TrueType.

One method that's even slicker than "sneakernet" and the HFS FST is an AppleTalk network. Assuming both the GS and Macintosh are linked with LocalTalk cabling, you can either move the font files physically or simply leave them on the Mac, then call them up with Pointless on the GS.

An AppleShare file server — a dedicated Macintosh running Apple's file-sharing software — can serve as a central depository for all your TrueType fonts. Any Mac-

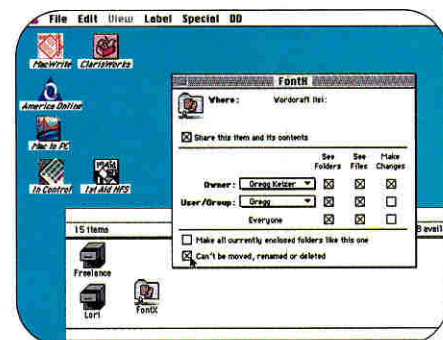

Figure 3. Setting privileges for the Macintosh's shared fonts folder under System 7.

intosh running System 7 with *File Sharing* engaged serves the same purpose. Just leave the TrueType font files where they are, on the Macintosh. All you need to do is tell Pointless where to find its fonts.

Let's say the GS is linked to a Mac running System 7. Set up the Macintosh so that you're sharing a folder named *FontX*. As a security measure, you'll want to mark the folder's privileges so that it can't be changed by anyone except the Mac's owner (**Figure 3**).

Because Pointless can't open the Mac's *System* file, you need to use the Option/drag technique to duplicate the TrueType font files to the *FontX* folder. Copy the desired TrueType fonts to the Mac's *FontX* folder now.

Back on the GS, connect to the file-sharing Macintosh by accessing the *AppleTalk* icon in the Control Panel. When you've established the connection, open the *Pointless* Control Panel device, then use its *Add* option to open the *FontX* folder on the Mac (the GS sees the shared folder as an AppleShare volume) and activate as many fonts as you want. As long as the network connection stays open, Pointless will look to the *FontX* folder on the remote Mac for those TrueType fonts. If the network link is broken or, more likely, hasn't been activated, Pointless asks you to insert a disk. There's no disk, of course, but the message is enough to remind you to reactivate the network connection.

Using a Macintosh as a TrueType font-storage facility slows things down: Pointless takes time to compute the font's size and style, and making it fetch its data over a network adds several seconds to the process. But the advantages will often outweigh the delay. If the GS has no hard

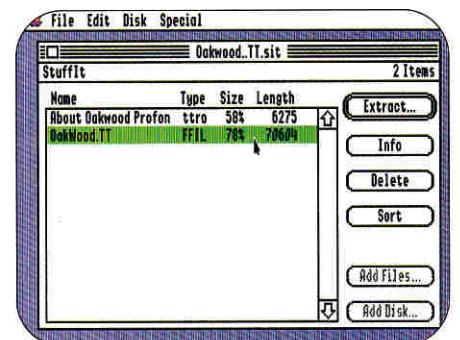

Figure 4. Using a GS to retrieve a Macintosh TrueType font file from an on-line service.

BRIDGING THE GAP

disk, for example, which is likely in a network environment, you don't have to worry about squeezing the TrueType font files onto a *System* floppy disk. Everything stays on the Mac's own hard-disk drive.

And sharing TrueType font files from one Macintosh with several GSeS simplifies things immensely. Any changes to the font library are automatically global, so you don't have to worry about updating every GS' *System* disk each time you add or delete a font from the collection.

Remember to check the licensing agreement for the fonts you've purchased before using them in a network environment, or before sharing them in any way. Remember, too, that you need a copy of Pointless for each GS you use it on; Pointless site licenses are available from WestCode, the developer and publisher of Pointless.

FONTS FOR FREE (ALMOST)

Although professional TrueType fonts are available from a variety of sources (including WestCode), your appetite for fonts may well outpace your pocketbook. If that's the case, you can again turn to the Macintosh as a wellspring of resources, specifically on-line services and their collections of shareware and freeware fonts.

Head to America Online's *DTP* section, or CompuServe's *System* and *Vendor Forums*, where you'll find scores of shareware and freeware TrueType fonts. You can download them directly to your GS or to a Mac first.

You'll notice that most of the TrueType font filenames sport the extension *.sit*; this means that the file was compressed with **StuffIt**, a more-or-less standard archiving program used in Macintosh telecommunications. Go ahead and download the file to your GS. You'll take care of the compression in a moment.

Before you log off the on-line service, though, locate the freeware program **GS-ShrinkIt** and download that as well. (The newest version, 1.0.6, is your best bet, since it corrects some problems with non-archiving TrueType font files.)

When you've got both files on a GS disk, launch GS-ShrinkIt, then open the Macintosh archive file. You'll see a screen that shows the file(s) within the archive (**Figure 4**). Extract the file(s), drop the TrueType font into a convenient folder,

then use Pointless' *Add* option to activate it. Run AppleWorks GS and you'll see your newest typeface on the *Font* menu.

FLIP THE SWITCH

PC resources are also open to Apple desktop publishers, thanks to a little creative translation. Just save a Windows TrueType file (identified by its *.TTF* filename extension) to a DOS-formatted disk on the PC, then stick that floppy into the Mac's SuperDrive. Run **Apple File Exchange** to transfer the font file to the Mac, or **DOS Mounter**, which displays DOS disks on the desktop.

Now run the \$10 shareware program **TTConverter** to turn the Windows font into a format the Mac comprehends, for either System 6 or System 7. Once translated, you can drop the file into your Mac's *System* folder (7) or install it with *Font/DAMover* (6). Once in Mac format, that TrueType font is also available to Pointless.

Here's another switch: Not only can you shift TrueType fonts from the Mac to the GS, but you can even send them from the GS back to the Mac. With System 6 on the GS, copy font files to a Mac 400K or 800K floppy, then sneakernet the disk to a Mac. And an AppleTalk network connection works just as well from GS to Mac as it does from Mac to GS.

When you move a TrueType font from GS to Macintosh, though, the Mac doesn't recognize the file without some help. You need to change the file so that its *type* and *creator* match those the Mac expects to find in every TrueType font file.

Find a Mac utility that can identify a file's creator and type designators; I use **1st Aid HFS**, part of Microcom's **911** disk-and file-recovery package. Select the TrueType font file and examine its creator and type. The former will be *pdos*, while the latter will probably be something that looks like *p>>*. Change the file's type to *tfil*, and its creator to *movr*, then designate the font as a *System* file. Now the Mac understands the file (even changes the file's icon to the TrueType design.) Drop the file into the Mac's *System* folder and it's available in any application.

PAYING THE PRICE

TrueType is a blessing, sure, but it doesn't come to the GS without a price.

You have to buy a copy of Pointless, first of all. And not every downloaded Macintosh TrueType font will work with Pointless. Of the dozen or so Mac TrueType fonts I pulled from America Online, for instance, two either refused to decompress with GS-ShrinkIt or simply wouldn't work with Pointless. If you generally shun digital adventure, buy commercial TrueType fonts or purchase a disk of shareware/freeware fonts that have been Pointless tested.

For the lucky few GS owners who have PostScript laser printers connected to their computers, Pointless won't much matter. According to WestCode, the Apple LaserWriter driver included with the GS' system software can't take advantage of larger fonts, but forces the printer to use its built-in scalable PostScript fonts. WestCode is right; during testing for this column, numerous fonts that printed crisply in large sizes from the Macintosh produced substantial jaggies when sent to the same PostScript printer from the GS.

And what about users who don't have an Apple IIGS or can't afford to invest in Pointless and its TrueType technology? Are they left out in the fontless cold? Hardly — there are plenty of ways to share fonts between the Macintosh and the Apple II that don't depend on TrueType. We'll examine that bridge next month. Until then, have fun with fonts — lots and lots of fonts. □

MS-DOS APPLEWORKS

*inCider A+ Magazine

SuperWorks™

INTEGRATION FOR THE NEXT GENERATION OF PC USERS

NEW VERSION 2.0
 NOW WITH SPELL CHECKER,
 EMS SUPPORT, GRAPHICS,
 PCX DISPLAY, AUDIO SUPPORT
 AND MUCH MORE.

WHAT ARE THE EXPERTS SAYING?

"MS-DOS APPLEWORKS" *inCider/A+ 8/91"
 What do you say to an "MS-DOS clone" of Appleworks 3.0? Remarkable Technologies' SUPERWORKS (\$199), has caused more than one double-take around here. SUPERWORKS functions like Appleworks on any IBM PC except that it's faster. If you use Appleworks and can train your fingers to find their way around an MS-DOS keyboard, you can use SUPERWORKS. It even incorporates some features for which Appleworks users pay extra.
 ★★★★★ inCider Magazine, November 1991

Miami Herald/Craig Crossman 8/12/91
 Known as SUPERWORKS, this Appleworks clone does almost everything Appleworks does and more. If you know how to use Appleworks, you can use SUPERWORKS without picking up a manual. SUPERWORKS brings the functionality of Appleworks to the MS-DOS world while leaving behind many of its limitations.

Remarkable Technologies announces a breakthrough product which now delivers AppleWorks power on an IBM PC or compatible. SuperWorks lets AppleWorks users step up to a PC with AppleWorks files, utilizing an AppleWorks work-alike integrated package.

New features provide full & complete integration of all capabilities including; spreadsheet (3-D capability), database (the easiest to use and one of the most powerful anywhere), word processing with spell checker, improved communications package, new and improved graphics, new SWAT macros, the best in the industry and much more.

SuperWorks uses only 180K on diskette and it's the only integrated package developed for the notebook.

As a special introductory offer to inCider readers, SuperWorks is now available at the special low price of \$199.00. SuperWorks has a regular retail price of ~~\$400.00~~.

- ENTIRE PROGRAM USES ONLY 180K ON DISKETTE
- ONLY INTEGRATED PACKAGE FOR NOTEBOOKS
- 30 DAY MONEY BACK GUARANTEE**

REVIEWS

POOR GOOD GREAT

EXPRESS 1.0

Speed it up — print-spooling software caches your document and lets you get back to work fast.

You look *mahvelous*, dahling! Tell me, how long did it take you to get that way?" Fernando, Billy Crystal's slimy *Saturday Night Live* lounge lizard, would have had a field day with the Apple IIgs. Applications such as AppleWorks GS, GraphicWriter III, and Platinum Paint *do* make you look good in print. But printing any long document with these programs also means you might as well take a coffee break — your system is going to spend its time managing your printer instead of letting you

manage your workload. Express, a new utility from Seven Hills Software, is a charmingly simple solution to the problem of taking back control of your computer.

To use Express, you have to meet three conditions. First, you must use standard GS/OS programs that conform to the desktop environment of pull-down menus and windows. ProDOS programs such as Publish It! and AppleWorks Classic that work on both the GS and the IIe or IIc can't benefit from Express. Second, your printer should be connected directly to your GS. This excludes any networked printer such as the LaserWriter, but includes Apple's ImageWriter or StyleWriter and the Hewlett-Packard DeskJet or LaserJet series. Third, because of the way Express works, you must use a hard drive.

UNDER THE HOOD

Here's how Express works in a typical scenario. Let's say you've used AppleWorks GS' page-layout module to create a four-page exam. When you finish designing it, you issue the print command. Instead of

sending the document directly to your printer, Express takes command and transfers it to a disk file. When Express finishes creating this file, you regain control of your computer. As you shift gears to work on a lesson plan or write a letter to Aunt Martha, Express "steals" some processor time and sends the exam file to your printer. This process is called *spooling*. Each time you print a new document, Express adds a new file to the end of the queue. Note that Express doesn't speed

up the total time it takes to print a file. In fact, because printing is a two-stage process, the total time is longer. What you do gain by using Express is the ability to work on other projects instead of waiting for your printer to spit out your latest opus.

Installing Express requires making a backup of the original disk and launching the *Install* icon. Using Express is completely transparent. It's a CDEV (*control-panel device*), a mini-program that's always

- GS/OS print spooler
- 1.25MB Apple IIgs
- System 5.0.4 or later
- requires hard-disk drive, direct-connect printer
- GS/OS-specific programs only
- \$39.95

APPLE II REPORT

accessible from the *Apple* menu in a GS/OS program. The Express control panel displays names of files in the spool queue and how much of the current file has been printed. You can retain spool files after printing, too, so that you can reprint frequently used documents. You can also delay printing until a more convenient time. You can delete individual files before printing or turn off Express temporarily or permanently.

The Express package includes a single program disk and a well-written 23-page manual with index. The last few pages of the manual are devoted to questions and answers that solve typical problems you may run into when using Express.

NUMBERS, NUMBERS

The speed at which you regain control of your computer varies with your system software, print-quality setting, and the length and complexity of your document. In general, I found using Express meant I could get back to work 40 to 70 percent sooner.

I created a five-page document with the same text in both AppleWorks GS and EGOed, a text-editing desk accessory from GS+ magazine. Without Express, under System Disk 5.0.4 and using standard print quality, this document took 9 minutes 2 seconds to print in AppleWorks GS and 8 minutes 37 seconds with EGOed. Using Express eliminated most differences between the printing rates of different programs as well as variances in hard-drive speeds; the real differences showed up between system-software versions. System 5.0.4 required about 3 minutes 5 seconds to spool the document, while System 6.0 needed an average of 3 and a half minutes.

When I switched to *fast* and *best* print qualities for the same five-page EGOed document, I found the savings less substantial: Express improved *fast* quality by roughly 47 percent, and *best* by about 37 percent. For simple one-page text and graphics documents with either version of the system software, the differences in times were negligible: Express cut downtime from about 1 minute 16 seconds to 20 seconds.

SOFTWARE ALERT

Several cautions should be noted here. For example, starting a ProDOS 8 program such as AppleWorks Classic or Publish It! while Express is working will make the spooler abandon printing. Some ill-behaved GS/OS

KEYWORDS: FIRST KEYBOARDING SKILLS

Troll Associates Inc.
100 Corporate Drive
Mahwah, NJ 07430
(800) 526-5289

- new keyboarding package for K-2
- 48K Apple II
- \$39.95

Four sequenced activities with a friendly animated frog introduce children in kindergarten through second grade to letters and numbers on the computer keyboard. Youngsters learn to type single letters and characters, as well as simple letter/number patterns and words. A Teacher Options feature lets adults customize the exercises. Although this interactive program helps youngsters learn their way around a keyboard, there's no attempt to teach proper fingering position. In addition, the activities are so repetitive that kids will quickly tire of the software.

LEARN ABOUT DINOSAURS

Wings for Learning/Sunburst
1600 Green Hills Road
Scotts Valley, CA 95067
(800) 321-7511

- new early-learning science program
- 128K enhanced Apple IIe
- \$75

Eight captivating activities teach youngsters in first through third grade all about dinosaurs and other prehistoric animals. A point-and-click user interface encourages children to match animals with names, decide whether to feed specific dinosaurs meat or plants, and make their own dinosaur world. Kids use a ruler to measure these giant creatures and a scale to weigh them; they dig up the bones of a *Tyrannosaurus rex* and reassemble its skeleton. There's even an electronic field guide that kids can use to access more information

in the program's database. A simple word processor lets students write reports, too. And Learn About Dinosaurs doesn't forget the adults, either: A detailed Teacher's Guide with lesson plans provides pre- and post-computer suggestions. Learn About Dinosaurs is terrific because it combines in one package activities that encourage creativity while teaching science, prehistory, language arts, and math.

LOGOWRITER ROBOTICS

LCSI/LEGO Dacta
555 Taylor Road
Enfield, CT 06083
(800) 527-8339

- Logo-based word-processing and robot-construction kit
- 128K Apple II
- \$262 individual pack: Intermediate Materials Kit, Project Book, software
- \$136 expansion pack: Project Book, software (for site-license purchasers)
- \$404 Building Set with TECHNIC Control O Pack, LEGO bricks, interface box, transformer, slot card, cable (no books or software)

LogoWriter Robotics combines all the wonderful features of LogoWriter (turtle shapes, graphics, colors, and word processing) with the robotics commands of LEGO TC Logo. You can run this ProDOS-based software from a hard disk or install it on a network (not possible with the earlier DOS 3.3 version of LEGO TC Logo). To use robotics features, however, you must also have a LogoWriter Robotics Building Set (with LEGO bricks, motors, lights, sensors, interface box, slot card, cables, and transformer). Build a merry-go-round or conveyor belt and direct your robot's movements from the computer. Have a turtle follow a road on screen, while a LEGO car travels the road on your floor. Printed instructions explain how to synchronize screen animations with the movements of actual LEGO constructions, and how to integrate writing projects with turtle graphics, Logo programming, and LEGO constructions. This robust product is an absolute must for teaching complex ideas in an enjoyable, non-threatening way (if your budget can make the stretch).

Continued on p. 22

programs can cause problems, as well. For instance, the Finder under System 5.0.4 will turn off the spooler until you launch another GS/OS program. (Under System 6.0 it works correctly, however.) In addition, with the spooler working in the background, you can expect the speed of your applications to slow noticeably, although not enough to be unusable.

It's now possible to put together an excellent GS/OS-based system for creating quality print documents quickly and conveniently. Adding to a rich array of word processors, desktop-publishing packages, and graphics applications, auxiliary programs now improve the look of fonts, create mathematical notation, manage files, and translate among graphics formats. Express can fill an important niche in your system by making you look simply "mahvelous" — without waiting for your printer.

Ron Berntson

QUENTIN: QUENTIN'S NEIGHBORHOOD

Pelican/Queue Inc.
338 Commerce Drive
Fairfield, CT 06430
(800) 232-2224

- new reading-comprehension program
- 128K enhanced Apple IIe
- \$49.95

Seven "chapters" encourage second-graders to read for details as they try to find the missing Quentin Rabbit. The search takes place in the bunny's neighborhood as youngsters meet interesting characters who provide clues to Quentin's whereabouts. Whenever text appears on screen, the computer highlights each word for visual tracking. If the computer is equipped with an Echo or Cricket speech synthesizer, readers will hear story words as they're highlighted on screen. Many screens contain hidden "hot spots" that reveal messages or produce sound effects, animation, and music when selected, but they're too simple-minded to be motivating. Most second-graders will find Quentin's story too juvenile for their age level, even though individual words may be developmentally appropriate.

READING IN THE WORKPLACE: HEALTH CARE LEVELS 1-3

Educational Activities, Inc.
P.O. Box 392
Freeport, NY 11520
(800) 645-3739

- new reading package
- 64K Apple II
- \$295 package
- \$119/level

Students read short job-based how-to passages related to health care, then answer multiple-choice questions that test comprehension. Incorrect responses receive hints, leading readers back to the screen with the right answer. Each level contains 16 stories featuring real-life situations such as First Aid, Burns, Hospital Routines, CPR, Training to Become a Doctor, Vital Signs, and more. Levels are sequenced by reading ability. A built-in electronic dictionary helps with difficult words; reproducible activity masters reinforce off-line vocabulary development. There's nothing inherently wrong with this package. For the amount of money you're spending, though, it's just too dry and too book-like.

REVIEW-IT ALGEBRA I PARTS 1 & 2

William K. Bradford Publishing Co.
310 School Street
Acton, MA 01720
(800) 421-2009

- new algebra courseware
- 64K Apple II
- \$130

This package contains eight separate programs designed to help students review major Algebra I curriculum areas. It covers 34 topics, including inequalities, polynomials, exponents, fractional equations, quadratics, probability, and coordinate points. Teachers may use the disks for testing, remediation, extra-credit projects, or diagnostics. Each program follows the same format: Students answer 15 questions per session, with two chances to respond correctly. On-line help is available. After students solve a problem, they can choose another example of the same type, see an explanation of the problem, or move on to a new topic. An optional management system records test results. This product is comparatively expensive, but it's thorough and well designed.

"This is one of the few mail-order companies that takes the IIGS seriously. Not only that, but they constantly get high marks on our Feedback forms. So, if you are in the market for IIGS hardware, I give TMS my highest recommendation."

Steven W. Disbrow, Publisher *GS+ Magazine*, Mar/Apr '92

Our Pro Series 210 Mb Drive was awarded 4 Mice in the April 1992 MacUser—"The TMS Peripherals Pro 210...never let us down...with better-than-average speed, design and construction quality, packaging and support...this is a good choice."

Why ask, "Why a TMS Shadow Drive™?"

Custom Full-Featured Case (2.25" x 4.5" x 7.25") available only from TMS. This is not a generic case! We asked you what you wanted. Here it is!

Standard Features Include: Full 2 Year Warranty, Formatted with System 6, Power & Access lights at top-left of case for easy visibility, Apple™ Standard Lock System, Quick-Lock Power Cable, external SCSI ID selection, 25+ Mb Shareware package, full documentation & full-size, non-skid feet for total desktop stability. Options Include: Soft-Touch Carrying Case with removable partitions, Pass-Through 50 Daisy-Chain Cable, ESP—Extended Service Plan & Toll-Free Technical Support.

Shop & compare. Then call TMS for your best deal on a great hard drive!

KIDS

turn ON to Hi-Tech

Today's kids are pretty sophisticated. Fortunately, software is staying one step ahead of them — new programs for both the Apple II and the Macintosh combine fun and learning in ways that keep children, parents, and teachers satisfied.

BY LESLIE EISER

KIDS ARE NO FOOLS. They want what all computer users want — the adrenaline rush of the video arcade combined with the intellectual satisfaction of a valid educational experience. (Okay, kids probably wouldn't phrase it exactly that way.) But if you let a child choose among TV, Nintendo, and educational software, most youngsters won't even try a game if they know it's supposed to be teaching them something. Fortunately, though, it's getting tougher and tougher to distinguish between education and entertainment programs. Dozens of programs that combine fun and learning are available for both the Apple II and the Macintosh. Balancing fun and learning isn't easy, though, and only the best of the

current crop will satisfy the discriminating users at your house — or in your classroom.

APPLE II BASICS

Even though software developers increasingly favor the Mac and MS-DOS machines, many continue to release new products to support the millions of Apple IIs in homes and schools. For example, explorations in science, math, and music are the hallmarks of Broderbund's THE TREEHOUSE, and MUPPET LABS, A FIELD TRIP INTO THE SEA, and A FIELD TRIP TO THE RAIN FOREST from Wings for Learning. The latter two titles take kids deep into little-known worlds; the first two offer a wide variety of educational

Houghton Mifflin's ErgoMotion uses laser-disc video to teach basic physics concepts.

EcoVision's interactive technology lets students explore complex environmental problems.

activities, cleverly disguised as games starring a pair of friendly possums and members of the familiar Muppet team, respectively. Featuring attractive graphics, solid science, and carefully orchestrated play sequences, these programs represent some of the best software available for Apple IIs. Kids can play animal-matching games, compose music, practice basic leaf identification, and more.

Both *The Treehouse* and *Muppet Labs* run on minimum hardware — good news for those without the funds to finance a major upgrade. The sound effects in *The Treehouse* are particularly outstanding. Twenty different songs are available, each identified by a distinctive icon. Even the reward routines sound good.

From MECC comes **Storybook Weaver: World of Make-Believe**, a dynamite GS program for budding young authors — or even for hesitant older authors. It's designed specifically to encourage youngsters to write stories — there's even a required title page, complete with selectable borders. Each additional page may contain either graphics and text or just text. Kids can choose from 12 full-screen backgrounds, plus an enormous number of smaller images, including 40 different shelters, tons of nature objects, and almost 100 animals. Traditional human figures, including witches and wizards, share space with more-imaginary characters, such as giants, gnomes, and fairies.

Most importantly, kids can color the figures — so young story weavers can make their characters white, yellow, brown, even green. The only limitation is your youngster's imagination and possibly the program's hardware requirements. You'll need an Apple IIGS with a minimum of 1 megabyte of random-access memory (RAM), plus two 3.5-inch disk drives.

GS LASER EXTRAVAGANZA

The most exciting high-tech development for the Apple IIGS today comes from Houghton Mifflin. Its extensive set of laser-disc/computer packages in the **Science Vision** series — more like interactive TV than computer

scientific concepts at levels previously unavailable to them.

You have to see these products to appreciate them. **ErgoMotion**, for example, uses roller coasters and sports as common denominators to explore several basic physical concepts. By first designing a roller coaster, and then watching actual movie footage as the roller coaster is "tested," student scientists gain firsthand experience in the basic concepts of force, acceleration, and trajectory. In **EcoVision**, youngsters are ecology advisers, discovering on their own the complexity of today's environmental problems. The *Science Vision* programs aren't designed to prompt kids to find the "right" answers, but rather to expose them to interesting questions presented in an exciting format.

WHO'S BUYING WHAT?

Industry watchers who keep a close eye on the hardware-buying strategies of school boards are reporting an influx of color Macintoshes, most notably the relatively low-priced LC/LC II. As schools look to replace Apple IIs or to simply add to their computer labs, Apple is marketing the LC as its premier education computer.

The large number of LCs sold to schools (and homes) has established a new market for education software. As the current flurry of conversions, upgrades, and new releases show, many Apple II and MS-DOS developers are eager to jump on the color-Mac bandwagon.

Simple translations of existing PC software are fastest to market. Already established as educationally valid, technologically sophisticated, and undeniably fun, these VGA MS-DOS products arrive on the Macintosh dressed up with additional color,

System 7 support, and a friendly interface.

For instance, what computer-using kid, parent, or teacher hasn't heard of the infamous Carmen Sandiego? The mysterious Carmen even has her own television program now. Broderbund isn't content to let Carmen rest on her laurels, though. In the recent **Where in the World Is Carmen Sandiego? Deluxe Edition**, the

wily thieves of V.I.L.E., Carmen's gang of cutthroats and cut purses, lead young detectives on a merry chase. Accurate maps (using a variety of projection types), sophisticated and subtly contorted clues, an occasional speech by the boss, and incredible 256-color graphics images make this Carmen edition educationally valid as well as aesthetically appealing.

For action and adventure, plus drill questions to reinforce learning, try Lawrence Productions' **Nigel's World**, in which kids travel the earth in a hunt for the perfect shot (camera shot, that is). As their ability to solve the geographical puzzles grows, so does the difficulty of finding each location.

Super Solvers OutNumbered! (focusing on math skills) and **Midnight Rescue** (developing reading skills) feel more like video-arcade games than educational programs. Kids dash around buildings, jump over obstacles, and solve problems at a furious pace. Organized by level and by difficulty, these programs will keep youngsters from 7 to 14 entertained (and challenged) for hours. Still another PC-to-Mac hit is MECC's **Super Munchers**, which relies on speed and a knowledge of trivia for its intellectual appeal.

Recently converted from Apple II to Macintosh is the outstanding **USA GeoGraph** from MECC, a sophisticated database tool containing a wealth of information about every U.S. state. Accessed either through maps, by state name, or by topic, students can compare, sort, and chart every statistic by pointing and clicking.

WRITE ON, MACDUFF

Writing can be frustrating as well as fun; it doesn't take a child psychologist to recognize that if kids enjoy writing, they'll want to write more. The good news for Mac users is that not one, not two, but three word processors designed with kids in mind are available for young scribes.

First on the block is **The Writing Center** from The Learning Company. More an interactive page-layout program that supports writing than a traditional word processor, **The Writing Center**

A Field Trip into the Sea, from Wings for Learning, helps Apple II users study the briny deep.

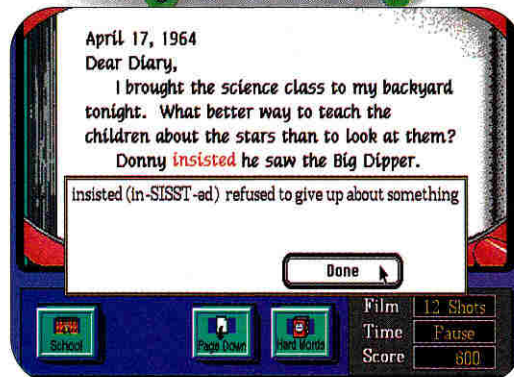

Familiar characters in Wings for Learning's Muppet Labs make science fun for youngsters.

comes with a spelling checker, icons, and 222 color pictures you can flip, crop, and size. The Writing Center is so easy to learn that putting out newsletters complete with headlines, graphics, borders, and multiple fonts is as simple as typing. Kids can import text from a variety of sources; you do all editing directly on the layout. This makes the final result easier to visualize, even though performance sometimes bogs down.

Even word wrap around graphics images is done on the fly: Just drop the picture into the correct location on the page and watch the text flow around it.

The flip side is **Bank Street Writer for the Macintosh** from Scholastic—a writing program with layout capabilities. There's a ruler to control margins, spacing and alignment; an easy-to-use spelling checker and thesaurus; and rudimentary control over color graphics. Even more exciting are the program's hypertext options. Kids can place sound bites and interactive note icons anywhere in the text before saving their creations. Other users can then read the text on screen — clicking on buttons as the mood strikes, enjoying the sound effects, or leap-frogging among related documents. Teachers will particularly like the software's *Frozen Text* option, which lets you add instructions or directions kids can't modify or print.

KidWorks, from Davidson & Associates, is a fascinating example of how a change in platform can make an enormous difference in the appearance and attractiveness of a product. First released for MS-DOS machines, KidWorks was a bit awkward, but on the Macintosh it springs to life. This combination paint, writing, and speech program now offers art with sound effects (paint drips,

The Learning Company's Midnight Rescue offers several levels of reading development.

the stamper clicks, and the pencil scratches), reworked full-color icons, and a large-text word processor featuring word wrap, speech options, and text-to-image conversion.

Designed with the youngest users in mind, KidWorks offers simple menus and few choices, encouraging kids to begin writing. Bank Street Writer for the Macintosh and The Writing Center are intended to meet the needs of older users who need less prompting and who are more interested in the appearance of the final product. All three are attractive and easy-to-use alternatives to higher-priced and higher-powered word processors.

If even a modified word processor is too sophisticated for your youngster, though, consider the **Explore-a-Story Plus** programs from William K. Bradford. Designed more as story starters and as animated readers, the heart of this series is its collection of brilliantly colored graphics pages filled with user-controlled animated characters. Kids can add text to each part of the story, or create original work by assembling supplied pieces. The *Plus* in the title of the Macintosh version comes from the addition of a large-text word processor that supports word wrap. This feature lets kids create longer stories, complete with animated pictures and color graphics.

MULTIMEDIA WITH QUICKTIME

QuickTime, the new extension to the Mac's system software, lets you play video footage with no additional hardware — adding significantly to the sophistication of today's software. Because video and animation are memory intensive, QuickTime applications are ideal for CD-ROM; CD-ROM players haven't made much of an impact at home

or in school yet, however, so most developers offer QuickTime products on floppy disk.

In **Operation Frog** from Scholastic, kids dissect a frog, then examine the pieces. Photographs and animated sequences explain and describe the various parts, but the really gory highlights are the QuickTime movies of frog lungs expanding and a frog heart beating.

Less realistic — more pure entertainment — are the QuickTime cartoons in the **Reading Magic Series** from Tom Snyder. Cartoon characters cavort across the screen as youngsters read the stories of **Flodd the Bad Guy** or **Jack and the Beanstalk**. On Macintoshes that support audio recording, such as the Classic II and the LC, you can even add sound bites. Parents can read the story once to make the recording, then let their youngsters play back the voice track at will.

Even **Headline Harry and the Great Paper Race** from Davidson gets into the QuickTime act with live-action videos of locations across the United States and notable moments in history. Not yet released — but full of promise — is the **New Grolier's Encyclopedia**. Still CD-ROM based, this updated version includes QuickTime video footage among a host of other capabilities. Not only can students use automated search techniques to locate pictures and text on any particular subject, they'll be able to access original video footage as well.

ALL MAC AND NOTHING BUT

In addition to the converts, a number of new made-for-Mac programs are now hitting the "edutainment" market. In Broderbund's **Spelunx and the Caves of Mr. Seudo**, for example, youngsters explore a world filled with buttons to push and pull, games to play, and mysteries to solve. Spelunx is more game than teacher, more pal than instructor, yet it's surprisingly educational for a program with no particular stated purpose. Kids will gain an appreciation of the effect of height on the behavior of falling objects, for instance, and some knowledge of the behavior of gases when exposed to electricity. Spelunx offers no reward for learning, just the satisfaction of figuring out

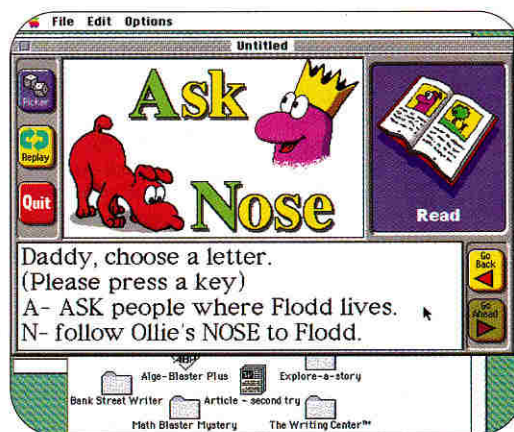

the hidden point behind every object found in the Caves of Mr. Seudo.

History-trivia buffs will find EarthQuest's **Time Treks** a delightful experience. Yes, it's a game, but the goal isn't to gain points — it's to gain understanding and knowledge.

You must begin by exploring the voluminous number of historical facts hidden in nooks and crannies throughout the program's *Archives* — only

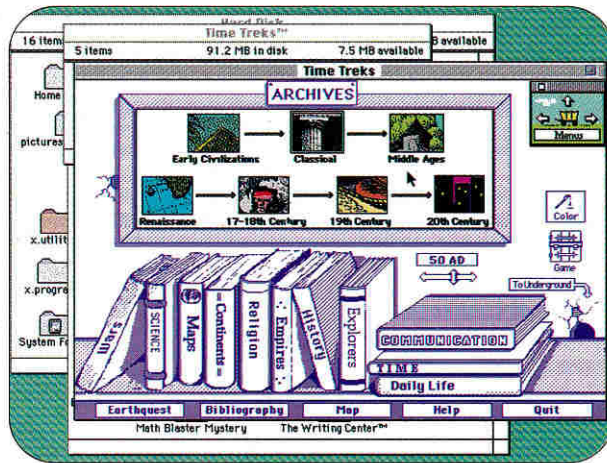

Davidson's KidWorks combines painting, writing, and speech with sound effects and simple menus.

Tom Snyder's Flodd the Bad Guy features QuickTime cartoons to help little ones learn to read.

Midnight Rescue grabs kids' attention with rapid-fire arcade challenges and entertaining obstacles.

Earthquest's Time Treks takes kids on a whirlwind ride through history in a race to stop the tyrants of the future.

then do you stand a chance of getting past even level 1 and on into your time-travel and treasure-hunt adventure.

FUTURE SHOCK

It doesn't take a detective to see that even in education circles, Apple II users are finding fewer titles from which to choose. Among the major developers, only MECC plans to continue releasing significant numbers of new II programs in the near future; most of the other powerhouse vendors are cutting back to at least some extent. The fall of '92 should bring another crop of fresh educational software from smaller companies and an increasing number of shareware developers, however.

The news is better if you use, own, or plan to buy a Mac. As color Macs grab

more and more market share, publishers are willing to put money into education projects. Sierra On-Line, for example, widely known for its MS-DOS adventure games, plans to release a Mac version of **Eco-Quest** — an exciting underwater ecology adventure — in the fall; Broderbund has several CD-ROM editions of its **Living Books** series in the works.

As Macs make the transition from the business office and the professional design studio to homes and classrooms, kids, parents, and teachers can rest assured that exciting new educational products await. □

HOME ROOM

In alternative classrooms and home-based schools across the country, Apple computers and a host of outstanding programs offer kids a wide range of tailor-made educational activities.

Some children *never* stay home from school — because for a growing number of elementary, junior-high, and high-school students, home *is* school. And, just as you're sure to find Apple computers in America's classrooms, you'll find IIs and Macs in home-school settings, as well.

The precise number of parent-educated children in this country is difficult to determine, but "Schooling Kids at Home," a 1990 *Time* magazine article, puts the estimate at more than a half-million. Although the exact figure isn't clear, one thing is: The home-schooling trend is on the rise. (For additional information, see the sidebar "Recommended Reading," our beginner's bibliography.)

Why do parents choose to teach their kids at home? According to Cheryl Gorder, author of *Home Schools: An Alternative*, a substantial number of families cite the absence of moral teaching in today's public schools. For some, home schooling means avoiding the negative

By CYNTHIA E. FIELD, Ph.D. • CONTRIBUTING EDITOR

influences that can simultaneously distract children from learning and confuse them about the religious or ethical values they've absorbed at home. Although enrolling children in a private or parochial school is a reasonable solution for some people, others don't have alternative schools in their neighborhoods. Even when they do, tuition can be a budget breaker.

In addition, parents who travel a lot — whether for business or pleasure — find that home schooling can be one of the best ways to coordinate the family's nomadic lifestyle with their children's quest for knowledge. At the other end of the spectrum are ill or disabled homebound children, for whom joining a mainstream classroom may be physically impossible.

Then there are the so-called gifted kids, a category that probably encompasses all children once we cast aside academic prejudices and acknowledge that talent manifests itself in many different forms — not just in the ability to earn impressive grades in a structured setting. Is there any doubt that children who excel in athletic performance, musicianship, or the visual arts are gifted, too? Yet schools are often ill equipped to accommodate these kinds of learners.

ALL IN THE FAMILY

Whatever the reason for home schooling, parents quickly discover that this

unique educational approach affords them the opportunity to design a tailor-made curriculum without sacrificing the three Rs. For example, 12-year-old Ben Rockmuller and his sister Emily Houk, who's 9, have never attended a formal school — yet their days are ripe with learning opportunities that grow from their own evolving interests. Each activity is enhanced by resources available in the Rockmuller-Houk home in East Chatham, New York. Those resources include Apple IIGs and Macintosh Classic computers.

Ben and Emily's father, Seth Rockmuller, describes his children's curriculum as "flowing out of family life. Schools tend to jerk you from subject to subject, but Ben and Emily are more independent in their learning. Ben's tremendously interested in city planning (thanks to **SimCity**), and he's captivated with San Francisco." Playing the game even inspired Ben to study earthquakes and geology. (Check the accompanying "Software Sampler" sidebar for a list of top-quality programs for your Mac or Apple II.)

Emily's a budding story writer. She enjoys dictating her work, which her dad then transcribes on the family's IIGs with the **AppleWorks 3.0** word processor. When Rockmuller confided that the family's looking for a good typing program, I recommended **Mavis Beacon Teaches Typing** for the GS. It provides age-appropriate lessons and gives immediate, positive feedback. There's even a car-racing game for "recreational" practice. When was the last time you could say that about a formal typing class?

The children supplement their education with **HyperStudio**, **MacDraw II**, **Microsoft Works**, **PaintWorks Gold**, and **Where in the World Is Carmen Sandiego?** (as well as other titles in the popular Carmen series). Ben and Emily prefer open-ended programs that let them explore on their own — or launch money-making enterprises in their spare time.

When I first spoke with Seth Rockmuller, Ben was still recuperating from the heavy demands of the Christmas cookie-baking business he started to raise extra holiday cash. He created flyers with **Microsoft Word** and distributed the advertisements to a dozen people. Business took off when one recipient made copies to give to her

co-workers. Although Ben learned a lot about tracking sales, balancing his books, and measuring ingredients, he discovered a serious downside: "Ben doesn't like to bake anymore," his dad notes.

INDEPENDENT STUDY

On Cape Cod, Harvard Divinity School graduate student Lisa Boken and her 15-year-old son Zac use the family's Macintosh SE and programs such as **Quark Xpress** and **MacPaint** to enhance their at-home educational pursuits.

Boken began planning Zac's education as soon as he was born. By the time he reached school age, however, she didn't have enough money to afford private school. Zac went to public school, where "he loved being with the other kids," says Boken, "but he felt as though they were doing all the things we had already done at home." To complicate matters, Zac is creative and artistic. Isolated math problems stump him sometimes, but he excels at carpentry work and making Shaker-style boxes — two crafts that presuppose math skills.

When Boken first expressed a desire to teach Zac at home, she found local authorities "very adversarial." Requesting permission from public-school officials, Boken says, was "like asking Volkswagen if you can buy a Chrysler."

Boken persisted, and seven years ago co-founded Abbington Academy, an alternative school in Yarmouthport, Massachusetts, with another home-schooling mother, Barbara Hayes. Boken and Hayes met through **Growing Without Schooling**, a home-schooling magazine published by Holt Associates. After considerable effort — including a good deal of *pro bono* legal work — Abbington Academy was approved as an alternative school in Massachusetts. It serves as the hub of a network of 20 home-schooling families who are committed to the school's philosophy: education for liberation.

Linda Zuern, a certified teacher, serves as Abbington's instruction coordinator. Zuern meets with families to set up individualized curricula that target each child's interests while addressing traditional academic subjects. Zuern writes each student's "curriculum contract" in September and his or her progress reports in

January and June. She also administers standardized tests as required by state law.

DIFFERENT STROKES

If you're interested in exploring home schooling further, first talk to your state and local education departments about legal demands and constraints so that you can make an informed decision. While home schooling is permitted by law, you're not completely free to do as you please. Curriculum requirements for home schools — indeed for public and private schools, too — vary from one state to another. In addition to reading, math, and writing, for example, you may have to include in your curriculum plan a unit on state history. Some requirements are surprisingly progressive. Borg Hendrickson, author of *How to Write a Low-Cost/No-Cost Curriculum for Your Home-School Child*, notes that Pennsylvania students must, among other things, learn about the "humane treatment of wildlife."

Most states require parents to comply with additional regulations determined by local school systems. For instance, New Yorkers like the Rockmuller-Houk family must submit to their school superintendent a yearly plan, quarterly progress reports, and an annual assessment. Although home schooling is your legal right, local authorities' legal responsibility is to see that your children get the education they deserve.

Note that home-school graduates don't usually receive a high-school diploma. If possessing that document is important, your child can earn a diploma by entering a conventional high school to complete his or her secondary education or by enrolling in a community college or correspondence school that offers a diploma program (such as the GED, or Graduate Equivalency Diploma). According to Seth Rockmuller, colleges and universities — including Harvard — accept qualified home schoolers.

When you're ready to take the next step, a variety of resources are available, whether you plan to design your own courses or follow a more standard curriculum. "Early on we used to plan [the day's activities] at the breakfast table," says Seth Rockmuller, who with his wife, Katharine Houk, founded the **Alliance for Parental Involvement in**

Education, an organization they run from their home. The group, which held its first formal conference last October, fosters all levels of parental involvement — from setting up a home school to finding alternative schools to demystifying math education. (See "Home-Schooling Resources" and "State and Local Organizations" for additional information, courtesy of *Growing Without Schooling*. Contact Holt Associates for a more comprehensive listing of home-school groups.)

Parents who prefer a structured curriculum can purchase a year's worth of lesson plans by mail from organizations such as **Calvert School**, whose study courses are designed by certified teachers. Or consider developing an individualized plan with the help of Borg Hendrickson's book, mentioned above. This resource leaves no stone unturned, and includes a comprehensive glossary. Even parents who aren't professional educators will find the book easy to use.

Æ Update . . .

GS-Ram III Trade-in offer extended - Æ's popular GS-Ram III trade-in offer has been extended through November 30, 1992. The program allows IIGS owners to trade-in any manufacturer's GS memory board and purchase a GS-Ram III with 2MB for only \$139. GS-Ram III is Æ's newest memory board that is engineered to provide maximum efficiency and greater reliability. Because of its compact, economical design, GS-Ram III uses less than half the power of competing memory boards and produces less heat. Less heat translates into a longer life for your computer and peripherals. GS-Ram III is fully DMA compatible and is expandable to 6MB. It comes bundled with diagnostic software as well as Æ's versatile AW3 Expander software. For more details, call (214) 241-6060 ext. 1126.

ShadowLAN classroom version now available - Æ is now shipping a classroom version of their popular ShadowLAN software. It retails for only \$299. ShadowLAN software for the Macintosh allows Macs on an AppleTalk or EtherTalk network to share each other's serial ports. Classrooms equipped with ShadowLAN can share a StyleWriter, Personal LaserPrinter, ImageWriter, modem, label printer or other serial devices. ShadowLAN allows every student on the network to use each serial device as if it were hooked directly into their computer thereby economizing the school's peripheral budget. The program accommodates up to 35 users and can be expanded in 5-user increments. ShadowLAN installs automatically and even provides Password Protection to prevent unauthorized access to any individual serial device.

TransWarp Classic gives you FX-Class performance - Æ's newest accelerator, TransWarp Classic, makes a stock Macintosh Classic from 4 - 11 times faster. It includes a Motorola 68030 processor ranging in speed from 16 MHz - 40 MHz and offers options for an FPU chip, 32K static RAM cache and virtual memory support. It installs easily by clipping over your existing CPU and Æ even includes a Mac tool kit to help you get inside your Classic. TransWarp Classic software installs on its own and provides a SANE patch called '882 Express to take full advantage of the optional math coprocessor chip. The retail price on TransWarp Classic ranges from \$599 to \$1699.

Æ announces Extended 80 Column Card to RamWorks III Trade-in - Now you can trade-in your extended 80 Column Card and purchase a RamWorks III with 512K for only \$89. RamWorks III is the most popular selling IIE memory board of all time. It easily installs in your IIE's auxiliary slot to provide super sharp 80 column text capability and memory expansion up to 1MB using standard 256K or 64K chips. RamWorks III also offers an RGB option to add an inexpensive CGA monitor and 16 bit processor option for programmers. It comes with RamDrive and ProDrive disk emulator software as well as Æ's AW3 Expander software. The bundled software includes a self-diagnostic test and provides enhancements for all versions of AppleWorks including print buffer, file segmentation, auto-loading and time/date display. For more details, call (214) 241-6060 ext. 1126.

Æ's new ÆHD PlusDrive brings high density interface to your Macintosh Plus, SE and II - The ÆHD PlusDrive formats, reads and writes high density (1.44MB) Macintosh disks as well as 800K disks. The drive also works with 720K and 1.44MB MS-DOS formatted disks using an MS-DOS transfer program. The PlusDrive is fully SuperDrive compatible but does not require the SWIM chip upgrade required by Apple's SuperDrive. Simply plug the PlusDrive into your disk drive port for easy installation (an external drive connector is available from Æ for the Mac II). The ÆHD PlusDrive retails for \$449.

Æ releases low cost TransWarp LC - Æ is now offering a 25 MHz version of their popular LC accelerator. TransWarp LC 25 MHz has a \$799 suggested retail price that includes a Motorola 68030 25 MHz processor and offers upgrade options for a faster processor or FPU math coprocessor chip. It installs easily and provides a SANE patch called '882 Express to take full advantage of the optional math coprocessor chip. TransWarp LC is fully LC and LC II compatible and is upgradeable to 50 MHz.

Product Give-Away! - Call Æ direct and register to win a free Seiko Datagraph 2001 wrist watch. This programmable watch includes several unique features and will be given away absolutely free to 20 lucky customers in August and 20 more in September. Call to register at (214) 241-6060 ext. WATCH. While you're on the line, ask about our *Education Direct Program* and our closeout specials.

APPLEWORKS IN ACTION

HOME ECONOMICS 1

Buy or rent? Base your decision on accurate financial projections.

By RUTH K. WITKIN

TO BUY OR NOT TO BUY, THAT IS the question. In today's high-cost housing market, the dilemma of whether to purchase or to rent a place to live is almost as thorny as Hamlet's classic quandary. Many people get in over their heads because they don't take time to compare the costs of moving to a rented or purchased home.

One rule of thumb says that a family can afford a house that costs up to 1.7 times its annual gross income. But debt is a highly personal matter, and no pat formula can take into account the way you want to live and the trade-offs you're willing to make. What it can do, though, is serve as a guideline to help you avoid stretching your resources beyond a sensible limit.

Figure 1 shows the spreadsheet that lets you compare the difference between buying and renting. When you enter the cost of each option and your monthly gross income, the formulas produce the following facts:

- down-payment and mortgage amounts
- monthly, yearly, and total mortgage loan payments
- total closing, initial, fixed, and variable costs
- how much your down payment and security money

(held in escrow for you) can earn if you decide to rent

- immediate cash outlay
- how much more one option costs than the other, on a monthly and yearly basis
- percentage of your monthly income spent on housing
- estimated tax savings if you decide to purchase a house
- estimated earnings on the down payment and closing costs, assuming you invest this money instead of buying a home

- percentage of your monthly income spent on housing after tax savings and investment earnings are considered

In this session, you'll enter the costs and formulas associated with home ownership (left column); next month you'll enter the costs and formulas associated with renting (right column).

MORTGAGE HUNTING

Let's say you decide to buy, and start looking around for financing. A lenders' yardstick says a family can spend 28 to 33 percent of its monthly gross income on a mortgage, property taxes, insurance, heat, utilities, and maintenance. Closing costs are estimated at a hefty 7 to 8 percent of the loan amount for a house or condominium and 3 to 5 percent for a cooperative.

All mortgages are not created equal, and terms and rates vary a lot from lender to lender. Shop around. Lenders must tell you, in writing and before you sign an agreement, the *finance charge* and the *annual percentage rate (APR)* on your loan.

The finance charge is the amount you pay in interest and for such costs as mortgage insurance and origination fees, called *points*. Each point is equal to 1 percent of the loan. If a lender charges a 3-point origination fee, for example, you pay an additional 3 percent of the mortgage amount.

This finance charge — interest, insurance, points, and so on — is then converted to APR, the relative cost of credit on a yearly basis. APR is your key to comparing costs, regardless of the amount of the loan or how long you have to repay it.

You could be making the biggest financial commitment of your life, so get a well-rounded education in mortgages before you take that final step.

GEARING UP

Load AppleWorks and create a new spreadsheet file named **HOMEQUEST**. Referring to Figure 2, set up the spreadsheet as follows:

HOME PURCHASE VS RENT ANALYSIS				
TO BUY?		TO RENT?		
5	Price of Home	102,500.00	Cash Available to Invest	13,407.00
6	Down Payment (%)	10	Annual Interest Rate	10.25
7	Down Payment Amount	10,250.00	Times Compounded Annually	365
8	Mortgage Loan	92,250.00	Amount at End of Year 1	14,053.90
9	Annual Interest Rate (%)	13.75	Est Monthly Earnings On:	
10	Term in Years	30	Cash available in ES	120.58
11	Monthly Loan Payment	1,074.82	Rent security at 5%	6.67
12	Annual Loan Payment	12,897.84		
13	Total Loan Payment	386,953.87		
14				
15	Closing Costs:		Initial Costs:	
16	Lender's charge	4,227.00	Agent's fee (1 month)	800.00
17	Title search & fees	825.00	Security (2 months)	1,600.00
18	Legal fees	750.00	Painting	245.00
19				
20	Total Closing Costs	5,802.00	Total Initial Costs	2,645.00
21				
22				
23	YEAR 1		YEAR 1	
24				
25	Fixed Monthly Costs:		Fixed Monthly Costs:	
26	Mortgage payment	1,074.82	Rent	800.00
27	Property taxes	155.00	Air conditioner	7.00

Figure 1. Completed purchase-versus-rent AppleWorks spreadsheet.

• **Horizontal lines.** In cell A2, type quotation marks to tell AppleWorks that it should treat the next character, an equal sign, as text. Then hold down the equal-sign key long enough to fill E2. Move the cursor to A4, type quotation marks, hold down the minus-sign key long enough to fill E4, and press Return.

Now copy both lines to the clipboard: Leave the cursor on A4 and press Open apple-C (OA-C). Type T (for *To clipboard*) and hit Return to confirm Rows. Move the cursor up twice to highlight rows 3 and 2, and hit Return again. Now place the cursor on A21 and press OA-C. This time, type F (for *From clipboard*). Note that the lines below move to rows 22 and 24.

Now copy only the single line to the clipboard: Place the cursor on A23, press OA-C, type T, and hit Return twice. Place the cursor on A14, press OA-C, and type F.

Finish entering the long lines by copying the double line from row 2 or 22 to the clipboard the same way, then from the clipboard to rows 41 and 51.

• **Vertical line.** The vertical line in column C separates the two sides of the spreadsheet. The character that generates this line shares the backslash key to the right of the spacebar. Press OA-1 to jump the cursor to row 1, then move the cursor to C3. Now enter the line: Type quotation marks, type the vertical character, and press Return.

Next copy the character down column C: Leave your cursor on C3. Press OA-C and hit Return twice (to confirm *Within worksheet* and the *Source*). Move the cursor to C4 and type a period. Press OA-9 to jump to the bottom of the spreadsheet, then Up Arrow once to highlight through C50. Hit Return.

• **Column width.** Press OA-Left Arrow to skip to column A, then OA-L to access the *Layout* screen. Type C (for *Columns*) and press Return. Type C (for *Column width*), press OA-Right Arrow 15 times (to increase the width of column A from the default nine characters to 24), and hit Return again.

Now widen column B: Move the cursor to column B and press OA-L. Type C, press Return, and type C again. Press OA-Right Arrow three times (to increase the width to 12 characters) and hit Return again. In the same way, on your own, reduce column C to one character (press

Figure 2. Entries in home-purchase section.

OA-Left Arrow eight times); increase column D to 25 characters (press OA-Right Arrow 16 times); and increase column E to 12 characters (press OA-Right Arrow three times).

• **Entries.** Referring to Figure 2, enter labels and numbers. To save a keystroke after each entry except the last, don't press Return; just move to the location of the next entry. Indent one space for labels that fall under a general heading (such as *Lender's charges* in A16 under *Closing Costs* in A15); indent two spaces for totals (such as *Total Closing Costs* in A20 and *Basic Monthly Costs* in A39). To indent, type quotation marks and press the spacebar the proper number of times before typing.

• **Short lines.** In B19, type quotation marks, press the spacebar twice, type nine minus signs, and move the cursor to B29. Again, type quotation marks, press the spacebar twice, type nine equal signs, and press Return. Do the same in B36. (Enter each short line separately — you can't use the Clipboard to copy individual entries.)

• **Formats.** Set a standard value of *Commas* with two decimal places: Press OA-V and hit Return (to confirm *Value* format). Type C (for *Commas*), type 2 (for two decimal

places), and hit Return. Change the two-decimal-place format in B6 (the down-payment percentage) back to no decimal places: Place the cursor on B6 and press OA-L. Press Return twice (to confirm *Entry* and *Value* format). Type C (for *Commas*) and hit Return to confirm 0 (zero) decimal places. Do the same in B10 (*Term in Years*).

Other numbers need percent signs: In B48 (*Buy as % of Gross Income*), press OA-L and press Return twice. Type P and press Return. Do the same in B50 (*Adjusted Buy as % of Gross Income*). Of course, the percent signs won't appear until there are values in these cells.

Now center the label in A3: Place the cursor on A3 and press OA-L. Press Return (to confirm *Entry*) and type L (for *Label* format). Type C (for *Center*). Center the label in A23 the same way. Now that you've finished the setup steps, press OA-S to store the spreadsheet on disk.

HOME-PURCHASE FORMULAS

Enter the home-purchase formulas in the highlighted cells shown in Figure 1. Place the cursor on the cell receiving the formula, type it, and press Return.

The SUM formulas in B19, B30, and B37 include the cell directly above the first number in the list and the cell directly below the list. That way, if you insert any rows between these points, AppleWorks will adjust the cell references in the formulas to include the new rows.

FORMULA 1: Home-Purchase Down-Payment Amount. Formula 1 multiplies the price of the home (B5) by the down-payment percentage (B6) and enters the down-payment amount in B7.

Cell location: B7

Formula: +B5*B6/100

Now protect Formula 1: Leave the cursor on B7, press OA-L, hit Return, and type PN (for *Protection Nothing*). Be sure to protect every other formula as soon as you create it.

FORMULA 2: Mortgage Loan. Formula 2 subtracts the down-payment amount (B7) from the price of the home (B5) and enters the amount of the mortgage loan in B8.

Cell location: B8

Formula: +B5-B7

Remember, protect each spreadsheet formula, including this one, as you create it.

FORMULA 3: Monthly Loan Payment. Formula 3 calculates the constant monthly payments for a fixed-rate mortgage based on annual interest rate (B9), term in years (B10), and loan amount (B8). Formula 3, which uses the PMT function available in AppleWorks 3.0, converts the term in years to months, and the annual interest rate to a monthly percentage.

Cell location: B11

Formula: @PMT(B9/1200,B10*12,-B8)

FORMULA 4: Annual Loan Payment. Formula 4 multiplies the monthly loan payment (B11) by 12 and enters the annual loan payment in B12.

Cell location: B12

Formula: 12*B11

FORMULA 5: Total Loan Payment. Formula 5 multiplies the annual loan payment (B12) by the term in years (B10) to produce the total loan payment in B13.

Cell location: B13

Formula: +B12*B10

FORMULA 6: Total Closing Costs. Formula 6 adds the lender's charges (B16), title search and fees (B17), and legal fees (B18) to give you total closing costs in B20.

Cell location: B20

Formula: @SUM(B19..B15)

First, protect Formula 6. Now copy it to a cell where it can add three other items (AppleWorks copies the protection, too): Press OA-C and hit Return twice. Move the cursor to B30 and hit Return again. AppleWorks highlights B19 on the entry line at the bottom of the screen and asks whether B19 is a *No change* (absolute) or *Relative* cell reference in its new location. Both B19 and B15 are relative references, so press R. The result in B30 is 180.00.

Formula 6 can also add the three items under *Variable Monthly Costs*: Leave your cursor on B20. Press OA-C and press Return twice. Move the cursor to B37, press Return, and press R.

FORMULA 7: Fixed Mortgage Payment. Formula 7 doesn't calculate anything; it just copies the monthly loan payment

(B11) to the fixed-monthly mortgage-payment cell (B26).

Cell location: B26

Formula: +B11

The amount in B30 now matches **Figure 1**.

FORMULA 8: Basic Monthly Costs. Formula 8 adds the total fixed costs (B30) and total variable costs (B37) during the first year to get the basic monthly cost in B39.

Cell location: B39

Formula: +B30+B37

FORMULA 9: Immediate Cash Outlay. Formula 9 adds the down payment (B7) and total closing costs (B20) to determine the money you need immediately to buy a home (B44).

Cell location: B44

Formula: +B7+B20

FORMULA 10: Buy Is More than Rent, Monthly. Formula 10 calculates the dollar difference between buying and renting. The IF function produces one of two possible answers. The *Test* statement subtracts the basic monthly cost of renting (E39) from the basic monthly cost of buying (B39). If the difference is greater than zero (if buying costs more than renting), the *Then* statement enters the difference in B46. If buying costs less than or is equal to renting, the *Else* statement enters a zero.

Cell location: B46

Formula: @IF(B39-E39>0,B39-E39,0)

Cell E39 is empty, so for the time being the result in B46 is 1,576.82, not the amount in **Figure 1**. When you enter the formulas in the rent section, the results of this formula and other formulas in the buy section will agree.

FORMULA 11: Buy Is More Than Rent, Annually. Formula 11 multiplies the monthly difference between buying and renting (B46) by 12 to give you the annual difference in B47.

Cell location: B47

Formula: 12*B46

Formula 11 refers to cell B46, so the amount it produces for now is 18,921.80.

FORMULA 12: Buy as Percent of Gross Income. Formula 12 calculates the percentage of your gross income (E42) spent on the basic monthly costs of home ownership (B39) and enters the result in B48.

Cell location: B48

Formula: +B39/E42

Formula 12 has no gross income to work with yet, so it enters *ERROR*.

FORMULA 13: Estimated Tax Savings, Monthly. Formula 13 calculates the potential monthly tax savings derived by deducting property taxes and mortgage interest from your taxable income. During the first year, mortgage payments consist almost entirely of interest, which makes the monthly loan payment convenient to work with. Assuming a tax bracket of 28 percent, the formula calculates 28 percent of the monthly loan payment (B11) plus the property taxes (B27) and enters the result in B49.

Cell location: B49

Formula: .28*(B11+B27)

FORMULA 14: Adjusted Buy, Percent of Gross. Formula 14 calculates the percentage of gross income spent on a home purchase after tax savings (B50), so that you can gauge the tax savings' impact. The formula subtracts the estimated monthly tax savings (B49) from the basic monthly costs (B39) and divides the result by the monthly gross income (E42).

Cell location: B50

Formula: (B39-B49)/E42

Formula 14 has no gross income to work with yet, so it also enters *ERROR*. Now store the formulas on disk: Leave your cursor on B50 and press OA-S.

Now press OA-O (*Printer Options*). HOME-QUEST is 74 characters wide, so leave the standard ten characters per inch. You do have to adjust the margins, though. Type LM (*Left Margin*) and press Return. Now type .3 and hit Return again. Next type RM (*Right Margin*) and hit Return. Type .3 and hit Return again. Press OA-S to save to disk and return the spreadsheet to the screen.

Now turn on your printer. Press OA-P and confirm *All*. Confirm the printer (or type a printer number, then Return). Type today's date (or, if you have a computer clock, type @), and hit Return twice. The printer whirs, and there's the home-purchase section of the spreadsheet.

Next month, you'll enter information in the rental section, so that you can compare housing apples and oranges to determine which option suits your pocket-book's palate best. □

3 We Carry Thousands of Name Brand Items. Whatever your needs, we carry a full line of name brand systems, hardware and software.

PRESS ROOM

CARD TRICKS

For personalized messages and greetings,
Publish It! works DTP magic.

By CYNTHIA E. FIELD, Ph.D.

BRODERBUND'S PRINT SHOP HAS been around so long it's practically older than the rocks. Few would argue that this software classic laid the foundation for desktop publishing (DTP) as we know it today. But while The Print Shop in its many incarnations is easy to learn and convenient to use, the program lacks the nearly unlimited layout flexibility that characterized another (now discontinued) all-time favorite — **Print Magic** from Epyx.

From letters I receive, I can tell you that although Print Magic fans are chagrined at the loss of their favorite greeting-card program, they're an undeterred lot. At least one of them, Vivian Lynes, has found a way to coax Timeworks' **Publish It! 4** into serving as an extraordinarily capable substitute for creating stylish, personalized greeting cards.

HOT STUFF

In Lynes' words, "With thermography — or *embossing*, as it's still called in some quarters — a renewed interest in making greeting cards with Publish It! has arisen." (For thermography instructions and sources of materials, see "Hot Stuff," Press Room, January 1992, p. 56.)

Now retired, Lynes divides her time between homes in British Columbia and Arizona. "My Apple IIGS crosses the border twice a year as we change residences," she notes. In the States, Lynes is a member of the AZApple Club, a Phoenix-area Apple user group. She credits comember Pat Kern with inspiring her to develop and

share the Publish It! card-making method we'll explore this month. Kern also helped carry out the project. Among other things, she electronically scanned some of the noncopyrighted clip art that Lynes incorporated into her samples, including the Christmas card in **Figure 1**.

Making greeting cards with Publish It! has always been possible, but never has it been this easy. Early versions of the program couldn't flip imported graphics vertically or horizontally, so you had to print half a card, then turn the paper around and reinsert it into the printer to

Figure 1. Callouts for Vivian Lynes' Christmas card. 1. Front, graphics flipped vertically and horizontally. 2. Back, "credits" flipped vertically and horizontally. 3. Inside left, graphics imported without flipping. 4. Inside right, text frame holding message.

do the other half. (For a description of this two-step method, see "Easter Parade," Press Room, March 1989, p. 71.) Now, thanks to Publish It! versions 3 and 4, designing a birthday card, say, then printing all four panels in one pass is a piece of cake. Here's how.

Start up Publish It!, and press Open apple-4 (OA-4) to access *Size to Fit* mode (or pull down the *Special* menu). Pull down the *Page* menu and choose *Set Page Size*. Instead of the default 8-by-11-inch page size, select 8.5-by-11. Lynes says the resulting layout area represents a finished card accurately, making it easy to position text and graphics appropriately.

Select the line tool and draw a vertical guideline of any length. Make sure the line is selected — shows a square black handle at either end. (If an object doesn't have handles, select it by clicking on it with the pointer.) Press OA-M, or pull down the *Objects* menu and choose *Show Specifications*.

Enter the correct dimensions for the vertical line as listed in the accompanying **Table**. Be sure to click on the *Don't Print* check box before exiting the *Show Specifications* dialog box. That way, the guideline won't show when you print your greeting card. Draw a horizontal line with the line tool and establish its size and position.

The two lines divide the page visually into four quadrants, each representing a panel in your card-to-be. The upper-left quadrant is the front; the upper-right quadrant is the back; and the two lower quadrants are the inside left and inside right. Save this file as a template to use as a starting point whenever you create a new card design. (Lynes uses the filename **CARD.TEMPLATE**.) Then invent a unique filename for saving each completed card.

Any text or graphics you incorporate into the lower two quadrants will automatically be oriented properly when you fold the finished card. Objects in the upper quadrants, however, will be upside-down. Therefore, you'll have to flip those

BeagleWrite

The only Apple IIe/IIc word processor with Mac-like features such as a menu bar, mouse control, and dialog boxes.48⁹⁵

Now you can get BeagleWrite Picture Manager and Desk Accessories for just \$10 each when you buy BeagleWrite!

IT'S WHAT'S INSIDE THAT COUNTS

The one on the right can make you 900% more productive

Now you can decrease your ImageWriter II's printing time by as much as 90% with the Q-Buffer card. The Q-Buffer is a 32K memory card that installs easily into your ImageWriter II (yes, your ImageWriter II has a memory expansion slot, just like your computer). With the Q-Buffer, your computer sends documents to the printer then waits for your next command—instead of waiting for the printer to finish. Imagine printing one document while working on another. You've never been so productive! Order your Q-Buffer card today.

32K Q-Buffer.....\$59.95

objects vertically in the template. To visualize it, take a blank piece of 8.5-by-11 paper and fold it as you would a greeting card: first the top half down over the bottom half, then the left side over the right side. The card should open at the right. Now draw a stick figure and some text on the front of the card. Open the card and doodle something on the two inside panels. On the rear panel print credits.

Unfold the sample card, and place the flattened paper so that the front panel is at the upper left. As you can see, the picture you sketched in this panel is upside-down. Any text you printed is both upside-down and backwards. Use this rough copy as a quick reference when creating your first few Publish It! 4 cards.

On your Apple II, select the graphics-frame tool and draw a box in the upper-left quadrant, or front panel, of your card. Pull down the *File* menu and choose an appropriate *Import Picture* option. Locate and choose the illustration you'd like to use in your card. When it appears in the cropping screen, press the **V** key to flip it vertically. Frame the now-upside-down picture with the cropping box, then press the **Return** key to place it. Although the illustration appears upside-down on the computer screen, it will look fine after you fold the finished card.

Graphics images are great, but most greeting cards also feature a message on the front. Publish It! 4 can't flip text, just double-hi-res graphics. But that's a mere inconvenience for people like Vivian Lynes. She creates greetings such as *Happy Birthday*, *Season's Greetings*, and *Congratulations!* in her favorite graphics program, **TimeOut Paint** from Beagle Bros (distributed by Quality Computers). This design software comes in the same package as **TimeOut SuperFonts**, an AppleWorks 3.0 enhancement that prints text in attractive typefaces and styles.

Broderbund's **Dazzle Draw** and other 8-bit Apple II paint programs will also work. Whatever software you choose, select its graphical-text tool. (It usually looks like an uppercase *A* or *T* in a paint program's tool palette.) Type a message such as **HAPPY BIRTHDAY** and save it in double-hi-res format.

When you import graphics messages into the upper-left or upper-right quad-

Figure 2. Greeting-card envelope template for Publish It!.

rant of your Publish It! card template, press **V** and then **H** in the cropping screen. These commands flip graphical text both vertically and horizontally, so that your card will read correctly after you fold it.

Life gets easier when you design the inside, because you don't have to flip illustrations or text. Moreover, you can add ordinary text to these panels by drawing text frames and using either Publish It!'s resident fonts or public-domain GS fonts.

AN INSIDE MATTER

How about some handmade envelopes to match your Publish It! greeting cards?

All you need are a pair of scissors, a glue stick, and a template (**Figure 2**) I created a few years ago with Publish It! 2. (Later versions of the program work just as well.)

As you can see from the accompanying **Table**, the envelope is composed of seven objects — four text frames and three rectangles. The text frames make up the envelope's body (front and back), its left and right side flaps, and its top sealing flap. Use the text tool to draw the first text frame. If the object has no handles, select it with the pointer. Then press **OA-M** to pop open the object's *Show Specifications* dialog box, and enter the dimensions shown in the **Table**. Be sure to click on the *Frame Borders* check box. Continue this way until you've drawn all four text frames.

Parts of the text frames will constitute the periphery of your envelope, and you'll need them for cutting the envelope out. Other parts, however, aren't needed and will just become unsightly lines at the envelope folds — unless you do something to hide them. Fortunately, it's easy to cover these lines by creating three opaquing rectangles.

Select the filled-box tool, pull down the *Objects* menu, and choose *Set Pen Pattern*. Click on the white color swatch. Pull down the *Objects* menu again and select *Set Fill Pattern*. Click on the white color swatch.

Draw a rectangle of any size and, while its handles still show, press **OA-M**, or pull down the *Objects* menu and select *Show*

Table. Specifications (in inches) for card and envelope templates; n/a = not applicable.

PRESS ROOM

Specifications. Enter the specifications shown in the **Table**.

Use the text tool to create a text frame that begins about a quarter inch below the top sealing flap and about a quarter inch in from the left flap. Click the I-beam tool inside the text frame, select a typeface (*Font* menu), and type your return address. If you'd like to add an illustration, use the graphics-frame tool to reserve the area and then import your favorite clip art. Or make envelopes to match your cards by choosing and resizing the artwork you incorporated into the card's design.

For a personal touch, add an address-panel text frame and enter the recipient's name and address directly onto your computer-crafted envelope. Save each design with a unique filename. Print the envelope and use a paper cutter or scissors to snip it out. Place it on a flat work surface. Fold the body so that its bottom edge lines up evenly with the top edges of the two side flaps. Fold the flaps carefully toward the body and glue them.

Stockpiling greeting-card envelopes for later use is easy, too. Just print a copy of your finished design and photocopy it as many times as you like.

An envelope template has other practical uses, as well. Print a copy on paper, glue the whole page to a piece of thin cardboard, and use an X-Acto or other hobby knife to cut out the cardboard template. Whenever you want to create unique envelopes, trace the cardboard template onto gift wrap, old road maps, or other colorful paper.

FREE TO GOOD HOMES — AND SCHOOLS

This column is the last in our monthly Press Room series. You can continue to

enjoy DTP activities, however, with **Publish It! Projects**, a series of disks I've donated to the public domain. They're compatible with Publish It! versions 2, 3, and 4. Each disk includes one or more templates with step-by-step instructions, ready-to-print samples, double-hi-res public-domain clip art, attractive Publish It! fonts, and tutorials, tips, and techniques.

Most of the templates on my Publish It! Projects disks have never appeared in Press Room. (This month's envelope template is an exception.) Among the projects I most enjoyed developing are name badges (Volume 2), "while you were out" forms (Volume 5), restaurant-style gift certificates and "no smoking" name tents (Volume 6), personalized memo pads and business cards (Volume 7), and 19-cent postcards (Business Pack 1).

Your local Apple II user group or favorite on-line service may offer the disks. If not, contact **Christella Enterprise** or **Moonlight Software**. (See the accompanying "Product Information" box for addresses.) I've donated complete sets of Publish It! Projects to these two libraries.

Thanks for spending time with us in Press Room, for sharing your template ideas, and for fostering the Apple II spirit. Upcoming issues of *inCider/A+* will continue to feature interesting productivity and desktop-publishing projects for a variety of programs — so stick around, and, meanwhile, keep those (homemade) cards and letters coming. □

HYPERACTIVITY

MAGNIFICENT OBSESSION

Get hooked on hypermedia — it's fun, it's educational, it's the ideal tool for home, school, and business presentations.

By DEAN ESMAY

LET'S FACE IT — HYPERMEDIA converts can be a royal pain in the neck. Read that again, because I mean it. There are people in this world (especially the computer press) who talk about hypermedia as if it's some kind of quasi-mystical state of higher electronic existence — the greatest technological advancement since the automobile. And they regard anyone who isn't already a devoted user as some kind of Neanderthal.

Meanwhile, there's a rumbling among the pagan hordes — and it's getting louder. A number of people out there are growing more and more hostile — they're saying they're sick of hypermedia being “shoved down [their] throats.” In other words, it seems that a lot of hypermedia enthusiasts, having latched onto a good thing, have become so obsessed with the subject they're starting to get on other people's nerves.

So what's the real story? Is there any substance behind the hype? Hypermedia may well be the most ridiculously aggrandized phenomenon to hit the computer world in the last few years — but that doesn't mean it's not an important development in software technology. Hypermedia's significance lies in its adaptability: Simply put, it's a very practical tool, perfectly suited to a wide variety of projects for home, school, and small business. It can even be a platform for the enterprising software developer. In fact, there are very few people who *can't* find some use for hypermedia.

And here's the best-kept secret: It's a lot of fun. Anyone can use it — preschoolers, retired people looking for a hobby, and anyone in between. What we hope to do in HyperActivity is help you understand why hypermedia is enjoyable, educational, and useful all at the same time, while avoiding the kind of hype that makes the whole subject seem mysterious or overblown.

PUTTING IT ALL TOGETHER

Just what do we mean by *hypermedia*? Anything that communicates an idea can be considered a *medium* — art (visual images), books and magazines (the written word combined with images), radio (the spoken word), television (the spoken word combined with images), music, poetry, dance, even facial expressions.

The term *multimedia* suggests several types of media used separately, but all focusing on one particular topic. In your science classroom, for example, you might combine a film strip on photosynthesis with a lecture and discussion, a chapter in the textbook, and a hands-on experiment measuring sugar and oxygen production in live plants.

Hypermedia is a little different. To communicate information, it combines the features of several different types of media into one: text, sound, music, photos, computer painting and drawing, video, and animation all in one place. The other defining standard of this hybrid medium is *nonlinear access*: If a hypermedia creation is designed right, you can explore information in whatever direction you want.

For example, unlike reading a chapter in a book from beginning to end, or even searching through an index to find the sections you want, you can instead move about from place to place within a hypermedia presentation instantly. It doesn't present information in any strict order; rather, the computer offers you a multitude of possible paths and you decide the direction in which you want to explore.

For instance, let's say you're looking at a hypermedia presentation on Saudi Arabia. On screen you might see a map of that nation and a message saying *Tell me about the government*, another option saying *Tell me about the religion*, and a third saying *Tell me about the culture*. If you point to *Tell me about the religion*, you might hear a brief chant, accompanied by a picture of a mosque and a short essay on the customs and history of Islam in Saudi Arabia. Options on that screen might include *Tell me more about the origin of the religion*; *Now tell me about the government*; *Now tell me about the culture*; and maybe *Go back to the beginning*. Whatever branch you pick, that's where you go.

Early authoring software featured this type of branching exploration in text-only form, and we should note here that you can still use today's hypermedia programs to create text-only presentations if you like. *Hypertext* is a collection of screens showing standard written information, with certain words linked dynamically. It's hypermedia without the frills — a single “hyper medium,” if you will.

For example, you might decide you want to read about Eleanor Roosevelt, so you point to her name on screen to call up an essay on her life. While you're reading, you see a reference to her husband, Franklin Roosevelt, in the middle of a paragraph. You decide you want to know more about him, so you point to his name, right there in the middle of the paragraph, and the program transports you instantly to a screen showing biographical infor-

mation for Franklin Roosevelt. And maybe in the middle of that biography you see a reference to the Great Depression, and that interests you, so you point to it and voilà — you're now reading about that era of American history.

Hypertext features nonlinear exploration, but it sticks to just one medium — text. The great strength of full-fledged hypermedia is its *immediacy* — its ability to let you explore a subject more directly and in greater depth through associated sounds and images as well as text, if you want to.

THE BASICS

While future installments of HyperActivity will feature hands-on projects for home, classroom, or office, let's begin this month by explaining the fundamental structure of a hypermedia presentation.

Each primary work screen, containing text, graphics, and options to call up sound or music, is called a *card*. Related cards, or screens, on a particular topic are put together in one single file, called a *stack*. Certain data is presented on one card, different information on another card, and so on, like a stack of cardboard index cards you'd flip through.

Navigation through this collection of cards, and any associated sound and

graphics examples, is simple. If you've used other Macintosh or IIGs programs, you're already familiar with *buttons* — menu-style items you click on with your mouse to indicate choices such as *yes*, *no*, *save*, or *cancel*. In hypermedia files, clicking on buttons calls up sounds or graphics related to your card, or takes you to other cards in the same stack.

Looking back at our Saudi Arabia stack, the screen displaying the map of the country is one card, the screen showing information on religion is another card, the screen with cultural data is yet another card, and they're all in one file called a stack. You use buttons on the cards to move about within the stack. Easy enough, right?

TOOLS OF THE TRADE

So how do you get started? One way to take advantage of hypermedia is to boot up a stack created by another author (available either from a third-party company or in the public domain). It's just like running any kind of program — to use it you don't have to know anything about how it works. If you want, you can just think of such stacks as regular computer programs, the only difference being that you may need a hypermedia program to run them. It's that simple.

The real fun, though, comes in making your own stacks, or modifying stacks that are already out there. Most hypermedia authoring software is amazingly easy to use — even elementary-school kids can design coherent stacks.

In the Apple world, there are three primary hypermedia authoring systems — **HyperStudio** for the IIGs from Roger Wagner Publishing; Apple's **HyperCard**, in versions for the IIGs and the Macintosh; and the 8-bit program **Tutor-Tech** from Techware Corporation, for the IIe, IIc/IIc Plus, IIGs, and Macintosh LC/LC II (with Apple II Card installed).

Other programs on the market include Wings for Learning's **MediaText** for the Mac; Tracy Valteau's **Nexus** for the IIGs; Scholastic's **Super Story Tree** and **HyperScreen**, and **StoryWorks** from TI&IE, three 8-bit programs. Also available are the newcomers **LinksWare** (by Tracy Valteau) for the Mac and **Hypermedia Tools** for Apple II LogoWriter. Add-on products, such as Triad's **HyperStuff Collection** (graphics and sounds for HyperStudio or HyperCard IIGs) and Cheshire Grin's **Stack Enhancers** (authoring tools for Mac HyperCard), are also starting to make an appearance.

In upcoming columns, we'll address some of the differences among the three most common environments, but for the next few months we'll focus on HyperStudio. It's currently the easiest to use and most popular hypermedia program for Apple II systems, and most of the concepts underlying it carry over quite well to both HyperCard and Tutor-Tech.

In our next column we'll tackle the process of creating our first stack. Remember, almost anyone — student, parent, teacher, hobbyist, small-business owner — can get something out of hypermedia. We'll show you the basics, teach you some tricks, and help you tap into your own creativity. Our goal is to get more people interested in one of the most exciting applications of personal computers. But don't say we didn't warn you — once it grabs you, pilgrim, you'll be hooked. □

APPLE II FOREVER! • THE POWER II BE YOUR BEST®

standard SCSI ports on the back. The SCSI-ID selector is also on the back, a two-button clicking affair that in our tests responded predictably. The front panel looks like a standard floppy drive with an activity light-emitting diode (LED) and a manual-eject button. The fit and finish are acceptable, if utilitarian. A set of plug clips on one SCSI port refused to hold the cable snugly, and we're still looking for a green power LED that appeared in the manual's text but not on the case.

Typical of SCSI devices, the A-Hive Jr.'s installation was a breeze. If you want to include it in a SCSI chain, be sure you order the drive with its internal termination removed, or you'll be forced to put it at the end of the chain. Tulin seals the case with keyed screws rather than the standard Phillips-head variety to prevent user entry.

When used with an Apple IIgs, the Tulin drive requires a RamFast SCSI card and driver. Because of this, it hardly seemed fair to run this floptical through benchmarks made originally with an Apple II High Speed SCSI Card (see "Wanted: Hard Drives on the Run," July 1992, p. 40), so we went straight to Glen Bredon's ProSel-16 Disk Statistics to get a handle on how this beast performs.

The floptical drive was substantially slower than other hard drives we've tested on both linear and random reads, requiring 6 milliseconds per block for the first test and 68 milliseconds per block for the latter. This compares with roughly 1 to 2 milliseconds per block and 20 to 25 milliseconds per block for an average SCSI drive. The RamFast SCSI driver, however, is comparable to proprietary drivers from Zip Technologies and Applied Engineering. Thus, the required RamFast Card offsets some of the floptical's inherent torpidity. How much? Launching AppleWorks GS from the Finder under System 6 took about 20 to 30 percent longer than with a generic SCSI drive, and other operations (on both a Mac and a GS) showed a similar lag. The difference is hardly notable unless you're regularly spinning your drive for several minutes at a time.

Wash away any dreams you may have about bopping back and forth among your Apple IIgs, Mac, and IBM-PC with interchangeable high-density floppies. Even though the Tulin drive can read from and write to 21-megabyte, 1.44-megabyte, and

720K floppies, its low-level GS formatting is non-standard, and Mac formatting requires just the right driver. The Tulin manual is unequivocal when it tells you not to reformat your new high-density disks. If you want to initialize a disk, Tulin insists you use RamFast's *Partition* command on your GS, or the Mac formatting utility the company provides. Currently, 21-megabyte disks for this floptical are available only from Tulin, but they cost just \$25. At that price, you can afford to put several hard drives on your desktop.

The aggressive pricing of these little storage bombs is your only hint as to the Tulin drive's potential. When it's up and running, it's easy to forget that you can pop in disk after disk and never run out of space. Pair this drive with an inexpensive 10- or 20-megabyte SCSI drive (as a base system disk) and you'll be the proud owner of a flexible, infinitely expandable system.

The Tulin floptical is perhaps the ideal add-on product for Mac owners with internal hard drives. We could say the same for Apple IIgs owners, but internal drives' proprietary interface cards may conflict with the RamFast card. That caveat aside, at \$679, including disks, cables, and a top-notch SCSI card, Tulin's A-Hive Jr. floptical drive is a contender to watch for when the Oscars roll around.

Cameron Crotty
Associate Editor

What's the use of a database file," Alice in AppleWorks might have wondered, "without pictures or conversations?" DB Pix can't make your database talk, but it will hang pictures on your computer's screen. It adds a simple Open apple-B command to AppleWorks to display a hi-res graphic on a separate screen, or a Print Shop graphic right on the database screen.

Place your cursor on a category containing the name of a Print Shop graphic; when you invoke the new command, it looks as though the picture is inserted, like a new category, into the text screen. Actually, that's the opposite of how DB Pix works: It takes a quick "snapshot" of the text screen, combines it with a Print Shop graphic, and displays the result just like any other double-hi-res picture. It's a nifty trick I'd never have caught onto if Randy Brandt, its author, hadn't revealed the secret.

Each kind of picture, double-hi-res and Print Shop, has its advantages. Double-hi-res lends itself to a catalog of images, because DB Pix can show a series of pictures one after the other; but not at the same time as database data. Print Shop format, at least on the database screen, is better suited to the combination of data and image.

For testing purposes, I created a quick-and-dirty database of the states of the Union. Then I just placed the cursor on *Alabama.fc* and pressed Open apple-B, and the screen you see in the figure to the left appeared. To show the next screen, simply press the down-arrow key to move to the next record. I alphabetized the records in my file, but you can order them any way you prefer or select certain records. DB Pix works with selected records in the order in which they're arranged.

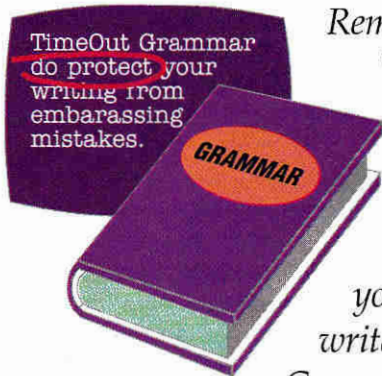

Note that the States database file has three graphics categories: *Print Shop Picture* (used here), *Color Picture*, and *State Flag*. The only limit on the number of pictures you can have in one record is AppleWorks' limit on the number of categories. To load a color picture, you must append a "c" to the file's name, as in *Texas.fc.c*. To display a "negative," try *Texas.fi*. You can also display inverse by hitting the spacebar while the picture's on screen.

PIX NITS

DB Pix works well and quickly from a hard disk or a RAM disk, but not without

INTRODUCING

TimeOut Grammar

Remember when spelling checkers were considered inconvenient? Well... they were inconvenient. But now all word processors have built-in spell checking, and everyone uses them. It's the same with grammar checkers. Until now. New TimeOut Grammar adds built-in grammar checking to your AppleWorks word processing. With TimeOut Grammar, you have the power to guard your writing against embarrassing errors. No matter what you write, from a high-school paper to an annual report, TimeOut Grammar will make it stronger, clearer and more concise.

TimeOut Grammar Now Shipping \$49⁹⁵
suggested retail \$79.95

Save up to 55% on TimeOut programs!
Any 3 for \$79⁹⁵ • Any 4 for \$99⁹⁵

This is a limited time offer and does not include TimeOut Grammar

TimeOut SuperFonts

Now you can print out your AppleWorks files with fancy fonts and graphics. SuperFonts works with all the same formatting commands you normally use in AppleWorks. SuperFonts even adds some new commands, like right justify and absolute tab. \$42.95

TimeOut Graph

Organize your spreadsheet figures into clear, informative graphs. Just choose the type of graph you want and it appears instantly—all ready to

print—with titles, subtitles, legends, borders, and more. \$52.95

TimeOut Thesaurus

Choose any word in the word processor and select Thesaurus from the TimeOut menu. You'll see a list of words with similar meanings—synonyms—displayed on the screen. Choose the new word you want and Thesaurus does the rest. \$32.95

TimeOut TextTools

These word processor enhancements take the drudgery out of producing complicated documents—term papers, proposals, newsletters, even your Great American Novel. \$32.95

TimeOut SideSpread

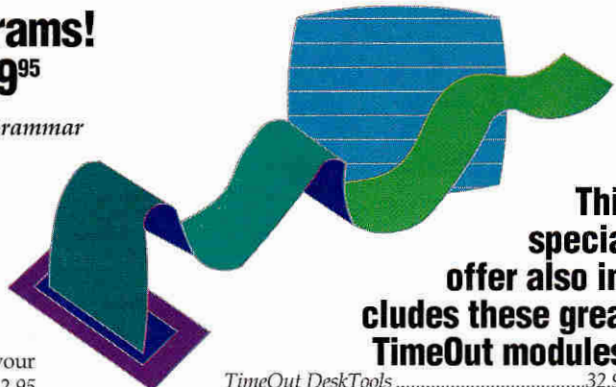

Print your spreadsheets and data base files sideways—inside AppleWorks! SideSpread can print all or part of your file in a wide variety of sizes and print qualities. \$32.95

TimeOut ReportWriter

ReportWriter's flexible report generator makes AppleWorks a powerful administrative tool. Generate report cards, attendance records, lesson plans, forms and more. \$48.95

TimeOut UltraMacros

Automate AppleWorks with this ultra-powerful program. Never retype repetitive information again. Record your keystrokes as you go, and then play them back—up to 4,000 keystrokes with one command! \$40.95

This special offer also includes these great TimeOut modules:

some small reservations. One drawback is that you can't print or save a record with a picture, unless you have a program or hardware that can dump a screen to a disk file or printer. (I saved mine on a Mac LC, which creates pictures of Apple IIe screens effortlessly.)

Another quirk is that when you "escape" back to AppleWorks' *Review/Add/Change* screen, you're not looking at the database record of the picture you saw last — AppleWorks goes back to the screen where you started. You'll have to remember which record you wanted, and bring that screen up yourself. This limits your images' usefulness somewhat as a fast way to find a certain record in a file by eye.

You must also name your pictures in the database exactly as they are on disk. A program like Beagle Bros' Filemaster, which can create an AppleWorks database of the filenames on a disk, might come in handy here. Keep in mind that if you specify no pathname, DB Pix assumes that the pictures are in the same folder as the database file. But you can specify a pathname for each picture and keep it wherever you choose, as I did in the database's *State Flag* category.

I thought at first that finding interesting Print Shop or double-hi-res graphics would be a problem, but quick visits to America Online's software libraries and the *inCider/A+* special-products department proved me wrong. Programs such as Broderbund's Dazzle Draw and Baudville's 8/16 Paint, which you can use to create double-hi-res graphics, are still available, and impressed me with their power.

WHITHER PIX?

DB Pix's drawbacks are small when compared to what it does smoothly: bringing graphics to AppleWorks, unobtrusively. Like the best AppleWorks add-ons — such as JEM's PathFinder and Beagle Bros' TimeOut QuickSpell — once DB Pix has been installed, you'll never notice it's there. But will you wonder how you ever did without it?

One might turn Alice's question back at her and ask, "What's the use of a database with pictures?" I admit that when I first saw AppleWorks GS five years ago, I was speechless at the demonstration of its ability to incorporate Apple IIGS graphics

into a database file. I remain dumb: I have yet to create a database with pictures. I use Claris' FileMaker Pro on the Macintosh, which also has the power to display pictures, but I never have.

You might do better to think of slide shows to which you might attach a database than databases that need pictures. For instance, it would be just busy work to add pictures of authors to *inCider/A+*'s database file of articles. But it might make sense to scan in a picture of each month's cover, and then create an issue database of articles and authors. Using DB Pix, an editor could then "flip through" all the back issues of *inCider/A+*, looking for a particular article, when all he or she knows is that it was in "the one with the telescope on the cover."

The human mind has an uncanny ability to recognize faces, magazine covers, constellations — just about anything visual. All but the biggest computers lack that ability. But computers, and database managers in particular, are better at finding data based on specific search categories than we are. Multimedia software such as DB Pix lets us do what we do well and computers do what they do well.

**INFOCUS 1600LC
PC VIEWER**

InFocus Systems
7770 Southwest Mohawk Street
Tualatin, OR 97062
(800) 327-7231
(503) 692-4968

- 16-color LCD projection panel
- requires Apple IIGS or Macintosh II with 12-inch or 13-inch monitor
- \$2695 1600LC color
- \$1695 1600GS monochrome

Desktop monitors for the Macintosh come in many shapes and sizes — that is, unless you're trying to give a presentation. In that case, monitors come in exactly two sizes: itsy-bitsy and far too small. Spectacular charts and graphics fizzle in cramped quarters, and who wants to jostle for viewing position in front of a tiny computer screen?

Apple IIGS display options are even more limited. Compatible RGB or composite color monitors come only in the intimate — and illegible — 12-inch size. If you've ever tried to demonstrate a software program to a roomful of children from a single computer screen, you know that chaos usually erupts as everyone tries to vie for space next to the display. Youngsters miss half the presentation because screen objects are difficult to see.

Whether you're presenting in the boardroom or in the classroom, everyone must be able to see the show. You could hook up a 37-inch display — but it'll weigh in at 300 pounds, and, besides, who needs that expense? Liquid-crystal-display (LCD) projection panels provide a cheaper, lightweight alternative. These notebook-sized devices use light from a conventional overhead projector to cast an enlarged image from a computer monitor onto a wall screen. Many presenters and audiences prefer LCD-panel presentations over conventional overhead transparencies and slides, because the panels permit real-time interaction with the computer.

Deciding which LCD panel to purchase depends in part on your budget and your presentation needs. Your purse strings may make a monochrome decision for you, painting a picture in black and white. But if you can stretch the budget just a bit, InFocus Systems offers an affordable color alternative. The company sells a lightweight panel called the 1600LC PC Viewer, which projects up to 16 "real" colors onto a wall or screen.

CONCABLETENATION

The 1600LC's scratch-resistant display area measures 8.2 by 6.2 inches. It features a resolution of 640 by 480 pixels and a 15:1 contrast ratio for crisp images. The device sits on a conventional low-wattage overhead projector, although model specifications claim it delivers fade-free presentations with overheads of up to 650 watts. It attaches to an Apple IIGS or a modular Macintosh (LC, LC II, IIfx, IICx, IICi, IIsi, or IIfx) color monitor via a Y-shaped cable. One arm connects to the computer's external-video port. The other attaches to the monitor's 15-pin video connector. The base of the Y-cable plugs into the LCD panel. You can also

Public Domain Software for only \$3.50

IIGS GAMES

GS110 Milestones 2000: This game is based on an old French game. You have to play mileage cards to advance your own auto while stalling your opponent with flat tires and accidents. Great graphics.

GS165 Mah Jong: Chinese tile strategy game.

GS117 Star Trek Classic GS: A remake of one of the earliest computer games ever written. Fire your photon torpedoes and laser, do short range scans and use your warp drives to defeat Klingon and Romulan star ships.

GS103 & GS104 Cosmocade: On the first disk, you must Journey to Calibus in a fast-paced arcade style game. Disk two is called Naxos. A joystick is required.

GS157 Fun, Fun, Fun: A strategy game called Floortiles plus 19 other fun programs.

GS145 Sensei: A karate-style game by the FTA. Use a joystick to fight your way into a black belt.

GS119 Columns 2.0: In this game which is similar to Tetris, you arrange falling blocks so that colors line up. Includes rock music background.

GS131 State-of-the-Art Games: This disk includes PlasmaLab 2, Xpurpose, BlackJack Tutor, From Beyond, FTA Plotting, Game Maker and Explorer GS.

GS129 Games, Games, Games: Cribbage, Rubik Cube, Poker Challenge, Solitaire NDA, Golden Bug, Elevators & Word Search.

GS118 Memory Card Game: Full color GS version of Concentration plus Wisconsin Rummy and Hearts.

GS137 Dr. Mario & Others: Tetris like game plus Quinette, PuzzleGS, and Pac Man NDA.

GS153 Bouncing 'Ferno: This game will remind you of Marble Madness as you attempt to bounce your way through a maze of ramps and elevated terraces. Brand new from the FTA.

GS30 Solitaire Card Games: Five different versions of solitaire including Casino, Slot Poker, Monte Carlo & Poker Solitaire.

IIGS MUSIC

GS166 SoundSmith Jukebox: Plays both SoundSmith and NoiseTracker songs with an animated display.

SL01 MidiSynth™ Jukebox: This is the hottest music program available for the GS. Full orchestral sounds with unbelievable quality. You won't believe your ears.

SL02, SL03, SL04, SL05 & SL06: Six full disks of MidiSynth songs for the Jukebox program or System 6.0's synthLab disk.

GS53 SoundSmith: The best known music program for the IIGS will have you rocking.

NT00 Noisetracker Version 1.0: An exceptionally fine music program from France.

NT02 thru NT17: Sixteen disks full of songs for use with Noisetracker.

HYPERSTUDIO

HS26 & HS27 Civil War Stack: Learn about the causes, the personalities and the history behind the U.S. Civil War. Great graphics.

HS48 Developer Pack: Write your own extensions to HyperStudio 3.0.

HS49 & HS50 Rocky Smith's Adventure - The Castle: A graphic adventure for use with 4th thru 6th grade students. In order to be successful in the adventure, the player must read, think and follow directions.

HS20 & HS21 Dinosaur Stack: Learn all about dinosaurs such as where they lived, their relative size and their diet.

HS45 Sound F/X: Digitized sound effects ready for use with HyperStudio. Beeps, drums, booms, barks, clangs and alarms.

HS18 & HS19 Washington D.C. Tour: Take your vacation in D.C. Visit the White House, the Pentagon and many other places.

HS09 Presidential Stack: Learn trivia about all the U.S. Presidents. Includes graphics.

HS08 HyperSpace: Two great stacks about the solar system and man's attempts to explore it. Sound effects and graphics.

ANIMATIONS

GS138 The Delta Demo: This program shows off the best of the IIGS.

GS135 Simple Animation Program: An animation workshop which you can use to design your own creations.

GS136 The SAP Wall: Based on Pink Floyd's "The Wall", this animation will rock you.

IIGS GRAPHICS

GS163 Political & Patriotic Print Shop GS Graphics: Eighty all-new graphics for P.S.

GS133 Religious Print Shop GS Graphics: Eighty color graphics for Print Shop.

GS07, GS08, GS29, GS35, GS77, GS78, GS100, GS106 & GS123 Graphics, Fonts and Borders for Print Shop GS: Nine completely different disks for use with Print Shop. Each disk contains at least 72 multi-color graphics and most have borders and fonts.

GS48 GIF Graphics: 75 colorful graphics in GIF format plus an all-new IIGS graphic utility program to view or convert them.

GS59, GS64, GS67, GS73, GS74, GS86, GS128 & GS132 Super Hi Res Clip Art: These 8 disks contain clip art converted from the Mac. They're great for use with AppleWorks GS or HyperStudio.

TF01 thru TF04: TrueType fonts for use with Pointless. Get rid of those "jaggies!"

GS148 DYA Exhibit A: A 3200-color slide show with 28 beautiful full-color graphics.

GS159 DreamVair: View 3200-Color Pics.

GS96, GS116, GS125 & GS126 — 3200 Color Pictures: 4 disks full of the best 3200-color graphics.

IIGS UTILITIES

GS167 System 6.0 Desk Accessories: A collection of new and old DAs for System 6.0.

GS158 System 6.0 Special Effects: Spruce up your System 6.0 disks with these utilities.

GS120 Icon Mania: Everything you need to add new icons to the IIGS desktop. Two icon editors and hundreds of pre-drawn icons.

GS47 GS/OS Goodies: Our all-time best selling disk. This disk contains over 20 new desk accessories including ShowPic.

GS154 Gyrus Desktop Utilities: Everything a power user could want. Desk Accessories galore, including a calculator, a clock, a sound player, a Chinese Checkers game. Also an animated screen blander, a SHR screen saver, a text file reader, utilities that load fonts & NDAs "on the fly". Much more!

GS151 Way Cool Jazz: Now you can jazz up your GS just like the experts do.

GS127 GS Productivity Pack: This disk contains two complete word processors, several desk accessories and El Macro.

Ile & Ilc PROGRAMS

R07 AppleWorks Patcher: Fix up your AppleWorks 3.0 with these patches.

H73 CEEMAC: Kinetic art generator.

G46 Columns Ile: A Tetris-like game in which you rotate gems to match up columns.

G38 Arcade Games: Cu'bit, Night Crawler, Car Dodger, Slots and Avalanche.

G43 Flobynoid: Clone of Arkanoid.

G22 Public Domain Defender: Fly your space craft and shoot down aliens who are trying to kidnap humans from the ground.

P50, P51 & P67 Multi-color Graphics for The New Print Shop: Each disk contains over 30 all-new full-color graphics for TNPS.

P70, P71, P72 & P73 Christian TNPS Graphics: Each disk contains 120 different black & white graphics for The New Print Shop. All the graphics have a religious theme.

C47 U.S. Geography: USA Jigsaw and US Capitals make this disk fun and educational.

GS301 Guadalcanal: Re-enact the World War II battle in the Pacific. Requires 3.5" drive.

GS155 Computer Keyboarding: Learn to be an accurate and fast touch-typist. Requires 3.5" drive.

C42 Math Word Problems: Learn the basic procedures involved in solving algebraic word problems of rate and time or mixtures.

C55 Number Games: A collection of simple math games for elementary students.

Only \$3.50 per disk.

Why Pay More?

To order call:

(402) 379-4680

All the disks listed in this ad (plus hundreds more) are available from Big Red for only \$3.50 a piece. And if you order ten or more disks, the price drops even lower to only \$3.10 per disk. This price includes shipping and handling to U.S. addresses. To order, write or call today. We accept MasterCard, Visa, school purchase orders or personal checks. Please note: Some of the programs listed here are shareware. *Help Support Shareware!* Free Catalog Available.

COMPUTER CLUB

423 Norfolk Avenue
Norfolk, NE 68701-5234

connect the panel to a "compact" Mac (Plus, SE, SE/30, Classic, or Classic II) with an internal video adapter. Cable connectors are clearly labeled, making setup a breeze.

This arrangement lets you face your audience as you work. You can view cursor movements and keyboard entries directly on the monitor screen as the projected image displays on a wall or wall screen. I tested the unit with an Apple IIGS. The portion of the cable that extends from panel to computer measures more than 5 feet. Unfortunately, the other branch

measures less than a foot. This means the projection panel and its companion overhead projector must sit on a table right next to the computer monitor to accommodate simultaneous monitor and wall-screen display. If you're cramped for space, you'll have to limit projection to wall display.

COME GATHER 'ROUND, PEOPLE . . .

The 1600LC panel lacks an on/off switch; it powers on automatically after you connect the supplied 12VDC trans-

former to a wall socket. Once a video connection is established, the panel captures a transparent image of the computer-screen display. Light from the base of the overhead radiates up through the transparent panel, reflecting the picture onto the projector's mirror and lens assembly. The image projects from the mirror onto a wall or large display screen.

A quiet, built-in cooling fan safeguards against picture distortion owing to concentrated heat build-up from the overhead projector. Viewing controls (a 10-function keypad) on the panel itself let you adjust images for optimum tint, vertical and horizontal positioning, 8- and 16-color palettes, tracking, and more. Some buttons have a dual function when activated along with the unit's shift key; mastering dual button action takes some time, though. The panel lacks brightness and contrast controls, and doesn't ship with a remote control that would let you fine-tune viewing adjustments from anywhere in the room.

The 1600LC can deliver a color range of 16 shades, thanks to InFocus' proprietary SaBRE technology. The unit projects a clear, sharp image, although you'll be disappointed if you expect display hues to map screen colors exactly. On a GS, for example, all colors have a distinctly pinkish cast. Blues and blacks have a purple tinge; orange and white look yellow. Text characters are very readable, though, and screen refresh is fast. Mouse response time is also quick, although a blurry trail appears on screen if you move the cursor too rapidly from one location to another. The ghost path sometimes makes tracking a moving cursor difficult.

The 1600LC provides a relatively affordable 16-color LCD projection system for Macs and GSes. While it can't match the color quality of a monitor, the unit does provide an alternative to the drab displays of monochrome panels. Although nearly \$2700 seems like an awful lot of money for the color you get, this is one of the cheapest ways to get it if you need it. If you're sharing computer-generated video information with an audience, an InFocus panel will help you project your presentation in style. □

Carol S. Holzberg, Ph.D.
Shutesbury, MA

Now you see 'em, Now you don't.

You've seen them before, those unsightly "jaggies" that make your text look a little rough around the edges.

Well, it's time to clear things up. Introducing Pointless™, a new font technology for the Apple IIGS.

With Pointless, letters displayed on the screen appear smooth, crisp and clear at even the largest point sizes.

What's more, Pointless improves printed output with almost any kind of printer, including the ImageWriter® and DeskJet™, providing impressive laser-sharp text.

To make all this possible, Pointless uses TrueType™ outline fonts, the new font standard on the Macintosh and Windows. Now GS users can share the benefits of this new font technology.

A snap to install, Pointless works transparently with any GS program, including favorites like AppleWorks GS,® HyperStudio™, Platinum Paint™ and GraphicWriter III.™

Simply pull-down the Font menu and your TrueType fonts show up along with your other GS fonts. But unlike regular GS fonts, Pointless will instantly create any point size you need from a single TrueType font.

To help you design great-looking pages immediately, a variety of popular TrueType fonts are included with Pointless. And, to add even more style to your projects, pick up one of WestCode's Type Collections. Each library of fonts contains several outstanding typefaces.

Now that you've seen what Pointless™ can do, wouldn't it be pointless to use your GS without it?

Look for Pointless at your favorite software dealer. Only \$69.95. Or call us at 619-487-9200.

See the difference for yourself!
Call (800) 448-4250 to request a free printer sample.

This ad's headline was created using Pointless™ (excluding the first line) and printed with a DeskJet.

CREATIVE VISION IN A CHANGING WORLD

MACWORLD Expo Canada 1992

September 15-17, 1992 at the Metro Toronto Convention Centre

When you look out over the exhibit floor at MACWORLD Expo, it's like looking through a kaleidoscope. Just a slight turn to the left or right, and you get an entirely new and fantastic view. With over 200 exhibitors, double the number from last year, MACWORLD Expo/Canada 1992 promises you more Macintosh excitement than ever before.

In addition to the exhibition, MACWORLD Expo/Canada also offers a complete Conference Program. Guided by a distinguished faculty, the Conference Program provides insights that are simply not available anywhere else. And if you're a committed DOS user, MACWORLD Expo/Canada will demonstrate the unique advantages offered by the Macintosh. You'll learn about MAC/DOS connectivity and how to take best advantage of both systems.

Preregistration Savings

Preregistration savings are available NOW: you can save \$10 on Exhibits-only admission (\$10 now vs. \$20 cash only at the door), or \$15 on all Conferences and Exhibits (\$75 now vs. \$90 cash only at the door). For discount registration information, please complete and mail the coupon found below. Then mark your calendar for September 15-17, and get ready to see the Macintosh at its absolute best!

**MACWORLD
EXPOSITION**
CANADA '92

Send completed coupon to: MACWORLD Expo/Canada, Brukar International Ltd., Suite 212, 385 The West Mall, Etobicoke, Ontario M9C 1E7, Canada; or FAX us at 416-620-1076. Or, if you prefer, call us toll free at 800-945-3313.

- Yes**, send me discount preregistration information about attending MACWORLD Expo/Canada 1992.

Edited by THE STAFF OF INCIDER/A+

I HAVE AN APPLE IIGS, AND I'VE been trying unsuccessfully to create a spreadsheet formula that would count the number of As, Bs, Cs, Ds, and Fs in a grade report. The grades correspond to consistent numerical parameters (for instance, 95 is always an A), but so far a tabulation algorithm has escaped me. Help!

Jim S. Wilson
Sardis, MS

Jim, we just happen to have a submission from Harold Shuckhart, a teacher from Anoka, Minnesota, who had the same problem. Here's how he solved it.

Figure 1. Grade-distribution calculator.

As a teacher, I've found it useful to prepare a grade-distribution table, not only for my own benefit, but also for the benefit of my students: When students see how close they are to the next grade cutoff, they often work harder.

Although it's not difficult to add up the number of As, A minuses, and so on, I already use an AppleWorks spreadsheet for my grading, so it made sense to simply devise a process for counting those grades, as well.

I don't have any fancy macro packages, nor did I want to create a multicolumn monster of a spreadsheet. After some head scratching, I came up with a simple and interesting data-composition and extraction process that uses @LOOKUP to count class grades.

The heart of my scheme is the creation of a 16-digit composite number (CN), which you can see in cell D30 of Figure 1 — the top layer of my entire grade spreadsheet. Each pair of digits in this number represents the number of scores in a particular grade range: The tens and ones places represent A minuses; the hundreds and thousands places represent Bs; the next two digits represent B minuses; and so on. Therefore, the CN 103 in cell D36, for instance, indicates one B and three A minuses. (We won't add in the number of As, for reasons I'll explain below.)

How do you translate grades into a composite number? As close friends of Claris' AppleWorks Reference manual know, @LOOKUP(value, range) searches successively through a range for the largest entry that's less than or equal to a partic-

ular value, and returns a corresponding value from an adjacent range.

Cells C43 through D51 of Figure 1 are a LOOKUP table for the complete range of grades from A to F. If I call @LOOKUP(C21,C43 . . . 51), for example, AppleWorks takes Ron's score of 88 and returns a 100, which we know represents a B.

Sound confusing? It's more straightforward than it looks at first. The key to understanding a composite number is to forget its direct numeric value and visualize it as a series of counters or tally marks, if you will.

When I add 100 to the CN, for example, I'm not really adding "one hundred," I'm incrementing the number of Bs by one. The zeroes function here only as place holders. (See the accompanying sidebar, "The Numbers Racket," for a simple practice round.)

After you've translated all your students' scores, add them together to produce the single CN, which you see in cell D30 of Figure 1. All that remains is to extract the data and massage it into a comprehensible form. The first two digits of the composite number represent the number of Fs, so you

Row	Column D	Column E

39		
40	@COUNT(D3...D25)	@SUM(E39...E25)

Figure 2. Data-extraction formulas.

can strip them out with @INT(CN/100,000,000,000,000), put the result into E30, create a new composite number with CN=CN-@INT(CN/100,000,000,000,000)*(1,000,000,000,000), and put that result into D31.

Figure 2 shows the formulas behind columns D and E in the data-extraction stage. As you can see, when you get down to the As in E38, you don't have to include

them in the CN, because they're the only grades left. This method avoids the errors AppleWorks introduces into any number more than 16 digits long.

After AppleWorks finishes the calculation, you'll see the breakdown of grades in cells E30 through E38 in **Figure 1**. From here, you can calculate what percentage of the total class each grade makes up.

If you're curious about how closely a class corresponds to the infamous "bell curve," this figure makes graphing your grade distribution easy.

Statistics classes can play with this spreadsheet, too, or if you're a science teacher doing plant-growth or genetics experiments, your new AppleWorks data-manipulation tool can help you crunch those results, as well. □

GOT AN APPLE II OR MACINTOSH HINT OF YOUR OWN? *inCider/A+* WOULD LIKE TO SEE IT. IF WE CAN USE IT, WE'LL PAY YOU \$25 AND MAKE YOU FAMOUS. SEND YOUR TIPS TO HINTS, *inCider/A+*, 80 ELM STREET, PETERBOROUGH, NH 03458.

THE NUMBERS RACKET

If you're having trouble understanding the mechanics of composite numbers, try this dry run with a pencil and a piece of paper.

At the top of the sheet, write **A=1, B=10, C=100**. Now write **ABCAABCCBA** in a vertical column. Start at the top of the column and transcribe the numbers that correspond to each letter, according to the table at the top of the page.

Add the numbers together, and you should come up with **334**. Because there were four As in the column, the rightmost digit of our composite number is a **4**. Because there were three Bs, the middle digit is a **3**, and because there were three Cs, the leftmost digit is also a **3**.

Try more columns with different ratios of As, Bs, and Cs, and watch the way the composite number changes. Just remember, because we're using only one digit for each category, we've got room to tally only nine occurrences before a counter reverts to zero and rolls a 1 over into the next digit.

— **Cameron Crotty, Associate Editor**

ALL NEW Sensational New Products from *inCider/A+* **ALL NEW**
Be more productive! **Announcing** *2 great new products* **Have more fun!**
designed with YOU in mind!

Keep all your essential household information easily accessible with **A+ Home Organizer** for AppleWorks GS* or ClarisWorks^[^]. Fantasy Football for the Apple II

Welcome to FantasyWorks - Version 3.0!! Everything a commissioner will ever need to run a Fantasy Football League. Includes AppleWorks files and templates for managing 4 to 12 team leagues: • Automated Standings • Fantasy Season Schedules • Report Generation • Fantasy Rules • Complete 1993 NFL Players Data Base • Financial Tracking and much, much more. Requires AppleWorks 3.0. AppleWorks ver 2.0 also available.

FantasyWorks also includes:

- TimeOut UltraMacro TaskFiles for Computing Fantasy Points with multiple scoring methods. Automatic Generation of League Rosters, and much, much more.
- Communications macros that automatically capture NFL statistics from Computer SportsWorld for Fantasy Point scoring. Macros work with popular communications products such as DataForm, Point-to-Point, ProTerm, ReadyLink, and Talk-Is Cheap. Requires specific communications software package and Hayes AT compatible modem.
- Templates and tips for creating your own Weekly League Newsletter using Publish II! Desktop Publishing Software. Requires Publish II 2.3 or 4.
- Over 30 different Fantasy League Forms to get you started.

All this plus an in-depth Fantasy Football Commissioner's Manual that fully covers the use of this software and explains what Fantasy Football is all about. Please don't delay! The NFL season is only a few weeks away.

BACKUP YOUR DISKS

When one of your favorite disks "crash" and the software publisher is out of business, all is lost—unless you've made a back up copy. With **Essential Data Duplicator 4.9 PLUS** you can back up your uncopyable "copy-protected" 5.25 inch disks... before it's too late!

EDD 4.9 PLUS copy system uses a special interface card for accurately backing up more disks than all copy programs together, guaranteed! In addition, we've included several useful utilities.

EDD 4.9 PLUS runs on apple compatibles, II+, IIe, and IIgs; price, **\$129.95**. *Daisy chain type or duodisk drives need \$15 cable adapter. Add \$5 shipping (\$8 foreign).*

A software only version, **EDD 4.9 standard**, runs on apple compatibles, II+, IIe, IIc, IIgs, and III; price, **\$29.95**. Add \$3 shipping (\$6 foreign).

No risk — If unhappy for any reason, return in 30 days for refund.

If you already own EDD, please pass this message to a friend.

Phone orders (707)965-2290 weekday mornings (P.S.T.). M/C, Visa accepted. Or, send orders to: **UTILICO**, 2600 Pope Canyon Road, Pope Valley, CA 94567. EDD is also available through your favorite software dealer.

any number of countries. Your electronic invoices would initiate instantaneous fund transfers — and if you were careful, you could even schedule them to get favorable exchange rates. As we move into the Information Age, international borders are becoming little more than lines on a schoolchild's map.

TOKYO CALLING

What are the implications for concepts like "balance of trade"? Experts say that despite headlines to the contrary, the U.S. actually exports far more to Japan than that nation does to us. Our trade figures just don't show numbers associated with information transfers, such as television programming, which never make it to the customs agent's clipboard. It's hard to be a protectionist in the Information Age.

What does that mean for kids and for education? By the time our children graduate from school, telecommuting will let them live and work wherever they want. As cable-TV companies adopt fiber optics and bring bidirectional high-bandwidth telecommunication into homes (leaving traditional phone companies in the dust), workers will be able to both hear and see colleagues all over the world. Meetings in "virtual" conference rooms will be projected in 3D, with each participant dialing up from home. Language translation will be transparent, with inflection and tone adjusted automatically to the speaker's voice. Goods will be produced locally, according to specifications telecommunicated from afar.

None of these activities will come under the scrutiny of immigration or customs people. All of these activities are either feasible today, or will be in the next decade.

What are our schools doing to prepare students for this future? Not only do most school computers lack modems, most classrooms lack telephones. What's wrong with this picture? More to the point, what are we going to do about it? □

DAVID THORNBURG'S LATEST BOOK, *EDUTRENDS 2010: RESTRUCTURING, TECHNOLOGY, AND THE FUTURE OF EDUCATION*, EXPLORES A WORLD FAR DIFFERENT FROM THAT IN WHICH WE WERE RAISED. ORDER DIRECTLY (\$12 POSTPAID) FROM THE THORNBURG CENTER, 1561 LAUREL, SUITE A, SAN CARLOS, CA 94070, OR CONTACT DR. THORNBURG AT X0495 (APPLELINK) OR X0495@APPLELINK.APPLE.COM (INTERNET).

BORDER CROSSINGS

As telecommunications erases national boundaries, the world opens to our children. Will they be ready?

Modern satellite communications has dropped the world into our laps — witness last year's "CNN war" in Iraq, when television showed us Scud and Patriot missile attacks as they were taking place. Similarly, modern telecommunications is making national borders, immigration control, and much of the Customs Service obsolete. Several years ago, after flying to Edmonton, Alberta, I was "detained" while going through immigration at the airport. I was visiting Canada to give

By **DAVID D. THORNBURG, Ph.D.**

a speech at an educational-computing conference, and the immigration agent asked about the materials I was bringing with me. When I told him, he informed me that I couldn't bring my presentation software into the country without a license, and that it would be confiscated.

Well, I was tired at that point, and a bit testy. I gave my disks to the agent and said he could keep them — destroy them for all I cared. "But I thought you said you needed the disks for your talk," he responded.

"No problem," I shot back. "I'll stop at a local computer store, buy some blank disks,

and upload my presentation from the U.S. via phone lines and a modem."

I soon found myself in a comfortable holding cell at the airport. About an hour later my passport and disks were returned, and I was told to go on my way. Apparently the Canadian economy would survive my incursion — this time.

I remembered this incident a few months back when my friend Ted McCain suffered a similar problem when coming to the U.S. to give a speech. Ted is the Canadian educational consultant who talks about "technological fusion" — a concept I

described in last April's Learning Curve ("MTV Comes Home," p. 64). He encountered an overzealous U.S. immigration agent intent on protecting American educators from the rantings of Canadian futurists. The matter was cleared up eventually and Ted headed "south of the border" to give his presentation.

While discussing our respective problems in Toronto recently (I now know how to cross the border without incurring the wrath of bureaucrats), Ted pointed out that national boundaries in some ways are now obsolete and customs agents may soon be. Technology has made certain key aspects of border control impossible.

PARIS IN TWO HOURS

As part of an international multimedia conference, I recently made a two-hour presentation to a group of people in Paris. I didn't pack for the trip, and I didn't suffer jet lag. Instead, I drove to a local community college's TV station and uplinked my presentation to a satellite, which beamed it to other satellites and then to ground stations around the world. During the presentation, participants talked with me through voice links. (Video links will come soon.)

That's fine for speeches, you say, but what about other kinds of work? Here telecommunications offers even greater advantages. Many companies in California are exploring opportunities for employees to work at home at least part of the time. These home offices cut down on traffic congestion and pollution, and give people more time with their families. (See "Homecoming," Learning Curve, May and June 1992, p. 64.)

Now here's the kicker. If I can "telecommute" from home, what's to keep me from working outside the U.S.? Through Internet I can dial into most countries. Data transfer is unfazed by international boundaries. Immigration officers can't cut the wires at the border — we link by satellite. Payment is no problem — most of the world's money moves as data on the same networks that carry our e-mail.

Think of the possibilities: You could work part-time for several companies located in

Resource Central

By Special Arrangement with Addison-Wesley and Apple Computer
Apple IIgs Technical Library Set — \$49.95

Offer expires Oct 31, 1992 — Available only to Resource Central subscribers
 Get the six books at the heart of the Apple IIgs technical library — a \$148.70 value — for just \$49.95 plus shipping. Call for details. The six books are marked () below:

Classic Apples

Technical references

• Apple II-Plus

QS-002 Sather: Understanding the Apple II \$14.95

• Apple IIe

QS-003 Sather: Understanding the Apple IIe \$14.95

AW-003 Apple: Apple IIe Technical Reference \$24.95

• Apple IIc

DA-007 Apple: Apple IIc Tech Reference, 2nd Ed \$30.00

DA-008 Apple: Apple IIc Memory Card Reference \$15.00

Applesoft

• Books

AW-010 Apple: Applesoft Tutorial (w disk) \$29.95

AW-021 Apple: Applesoft Programmer's Reference \$22.95

AW-040 Critchfield Dwyer: Bit of Applesoft \$9.95

AW-039 Myers: Graphics for the Apple II \$9.95

• Tools

BB-003 Beagle: Program Writer (Applesoft, prog editor) \$37.50

BB-002 Beagle: Beagle Compiler (Applesoft compiler) \$59.00

MD-004 Davis: ModemWorks \$49.95

KS-001 Microdot (Basic system replacement) \$29.95

IS-002 Basic Help (Online Reference & Help) \$29.95

DA-001 Apple: Apple Filecard Toolkit \$19.00

Pascal

• Books

AW-037 Senter Weiss: Pascal for Basic Programmers \$12.95

• Tools

DA-024 Apple: Apple II Pascal v1.3 \$69.00

DA-032 Apple: Apple II Pascal LabPak (10 copies on 3.5) \$69.00

ProDOS 8

AW-024 Apple: BASIC Programming with ProDOS (w disk) \$29.95

AW-023 Apple: ProDOS 8 Technical Reference (w disk) \$29.95

QS-001 Worth Lechner: Beneath Apple ProDOS \$12.95

QS-005 Supplement for ProDOS v1.2 & 1.3 \$9.95

TB-006 Doms Weishaar: ProDOS Inside and Out \$16.95

DS-002 disk for this book \$10.00

DOS 3.3

DA-022 Apple: DOS 3.3 User's Manual \$20.00

DA-023 Apple: DOS 3.3 Programmer's Manual \$20.00

QS-004 Worth Lechner: Beneath Apple DOS \$12.95

AW-038 Wintermeyer: Applesoft Toolbox \$9.95

• GS/OS

BW-012 ByteWorks: Programmers System 6 Reference \$45.00

AW-041 Apple: Apple IIgs GS OS Reference \$28.95

DA-027 Apple: GS OS Device Driver Reference \$29.00

AW-026 Little: Exploring GS OS and ProDOS 8 \$21.95

DS-006 disk for this book (3.5) \$15.00

High-level language tools

• HyperTalk

AP-002 Apple: HyperCard IIgs v1.1 \$69.00

DA-030 Apple: HyperMover (requires a Mac & a IIgs) \$15.00

• Pascal

BW-001 ByteWorks: ORCA Pascal \$90.00

BW-002 Byte Works: Pascal Tutorial \$50.00

BW-011 ByteWorks: Toolbox Programming w Pascal \$75.00

• C

BW-003 ByteWorks: ORCA C \$90.00

BW-004 Byte Works Learn to Program in C Tutorial \$50.00

• BASIC

MS-001 MICOL: Micol Advanced BASIC for the IIgs v4.0 \$99.00

Assembly language tools

CB-002 Wagner: IIgs Machine Language for Beginners \$19.95

DS-005 disk for this book (3.5) \$15.95

SS-005 Lichty Eyes: Prog the IIgs in Assembly Lang. \$29.95

DS-009 disk for this book for Merlin \$10.00

DS-010 disk for this book for Orca C \$20.00

• Assemblers

RW-002 RWP: Merlin 8 16 (DOS 3.3, ProDOS 8, GS OS) \$99.00

BW-005 ByteWorks: ORCA M Assembler v2.0 \$90.00

BW-008 ByteWorks: Merlin to Orca Source Converter \$18.00

• Disassemblers

BW-007 ByteWorks: ORCA Disassembler \$30.00

• Debuggers

BW-010 ByteWorks: ORCA Debugger \$39.95

DA-015 Applé: GS Bug and Other Debugging Tools \$30.00

Apple IIgs

Technical manuals

• Technical references

AW-018 Apple: Technical Introduction to the Apple IIgs \$9.95

AW-011 Apple: Programmer's Intro to IIgs (w disk) \$32.95

AW-022 Apple: Apple IIgs Firmware Reference \$24.95

DA-026 Apple: Apple IIgs Firmware Ref ROM 3.0 Update \$12.00

AW-002 Apple: Apple IIgs Hardware Reference \$26.95

AW-001 Apple: Apple Numerics Reference \$29.95

AW-014 Apple: Human Interface Guidelines \$14.95

AW-017 Little: Exploring the Apple IIgs \$22.95

DS-007 disk for this book (3.5) \$20.00

• Toolbox manuals

AW-019 Apple: Apple IIgs Toolbox Reference, Vol 1 \$26.95

AW-006 Apple: Apple IIgs Toolbox Reference, Vol 2 \$26.95

AW-036 Apple: Apple IIgs Toolbox Reference, Vol 3 \$39.95

CB-005 Gookin Davis: Mastering the IIgs Toolbox \$19.95

CB-007 Davis Gookin: Advanced Prog Tech IIgs Toolbox \$19.95

DRIVE SAFE . . . DRIVE HARD!

Inside and out, we've got a drive for you. From our reliable 143K 5.25" floppy drive to our super-fast 100MB Vulcan Gold Drive, Applied Engineering's disk drives are driven to be the best.

Æ 3.5" Drive

400K/800K/1.44MB Floppy Drive

- Format, read and write 400K and 800K floppy disks on Iie, Iic, IicPlus, IIGs, Mac and PC Transporter
- ÆHD version gives you 1.44 megabytes on Macintosh and on IIGs with Apple's FDHD Controller Card
- Fully Apple compatible
- 2-way LED indicator, green for read, red for write
- Auto eject
- Daisy chain port—works both ways, connect a drive to it, or connect it to another drive
- Stack and footprint compatible with Apple Drive
- Conserver compatible
- Full One-Year Warranty

Æ 3.5" Drive (800K)\$279

ÆHD 3.5" IIGs High Density Drive (1.44MB).....\$339

Vulcan Gold

40 to 100MB Hard Drive

- Designed specifically for the Apple II series
- Preformatted—plug it in and you're off!
- Vulcan GS preformatted with **System 6.0**
- Recognizes **ALL** Apple software including GS/OS, ProDOS, DOS 3.3, Apple Pascal, CP/M and MS-DOS for the PC Transporter
- Can be split in up to 16 different partitions
- Easily controlled through Control Panel Device
- 70 watt power supply (nearly twice the capacity of competing systems)
- Super-fast, state-of-the-art, IDE caching drive
- Tested and proven for years with all existing peripherals
- Support for years to come
- Full One-Year Warranty

40MB Vulcan Gold Drive.....\$899

100MB Vulcan Gold Drive.....\$1,795

5.25" Drive

143K Floppy Drive

- 143K Formatted, 35 Tracks, 16 Sectors
- Fully compatible with the Iie Emulation Card for the Macintosh LC
- Fully compatible with all Apple II models
- Proven Reliability
- Super Quiet
- Available Now!
- Full One-Year Warranty

5.25" Drive\$210

Order today! To order or for more information, see your dealer or call (214) 241-6060 today, 8:30 AM to 6:30 PM (CST), M-F. Or send check or money order to Applied Engineering. MasterCard, VISA and C.O.D. welcome. Texas residents add applicable sales tax.

APPLIED ENGINEERING®

The Apple enhancement experts since 1979.
