Security: Everyone

ProDOS Assembler: INA and DEA commands

=====

Two of the new mnemonics available for use with the 65C02 are INA and DEA: Increment Accumulator and Decrement Accumulator. The ProDOS Assembler does not recognize these mnemonics. Therefore, after using the x6502 directive to support the 65C02 command, you must use the mnemonics INC and DEC without any parameters if you want to increment or decrement the accumulator. INC and DEC will assemble into the object code that uses the machine instructions associated with INA and DEA.
